

Figure S4. Venn diagram of DEGs from different comparisons. **(A)** Venn diagram of up-regulated DEGs (upper) and down-regulated DEGs (lower) within and between high temperature (HT) and low temperature (LT) at different or same stages. **(B)** Venn diagram of DEGs from low temperature (LT), high temperature (HT) and the comparisons between different temperatures at same stages (HL). The overlapping parts of the different ellipses represent the number of DEGs common to these comparison groups. The gene sets labelled with yellow number represent genes that involved in both temperature response and fiber development.
