

Phytohormone Quantification

Method

Sample extraction

- Approximately 100 mg tissues were weighed and transferred into a 2-ml lysing tube containing ceramic beads (MP Biomedical, Australia)
- 70% methanol supplied with 500 ng/ml of internal standards was added to each sample tube – 800 µl for leaf and 400 µl for spike tissues.
- Samples were homogenized using Precellys 24 tissue homogenizer (Bertin Technologies, France) for 3 cycles of 30 s at 6000 rpm with 90 s pause between the cycles. The extracts were centrifuged at 13000 rpm for 15 min.
- Supernatants were transferred into a LC-MS glass vial and subjected to LC-MS analysis.

LC-MS analysis

- 5 µl of samples was injected into the LC-MS machine under the following condition.
 - LC machine: 1200 series, Agilent Technologies
 - LC column: Zorbax Eclipse EDB-C18, 2.1 × 100 mm, 1.8 micron, Agilent Technologies
 - Column temperature: 45°C
 - Mobile phase A: water + 0.1% formic acid
 - Mobile phase B: acetonitrile + 0.1% formic acid
 - LC gradient program

| At | %A | %B |
|--------|-----|-----|
| 0 min | 80% | 20% |
| 2 min | 80% | 20% |
| 3 min | 50% | 50% |
| 12 min | 5% | 95% |
| 16 min | 5% | 95% |
| 17 min | 80% | 20% |
| 23 min | 80% | 20% |

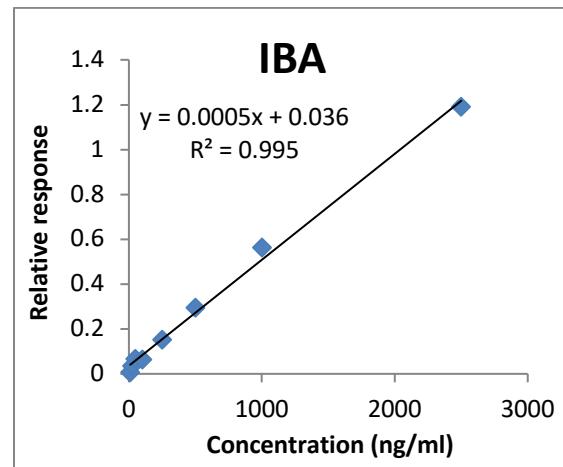

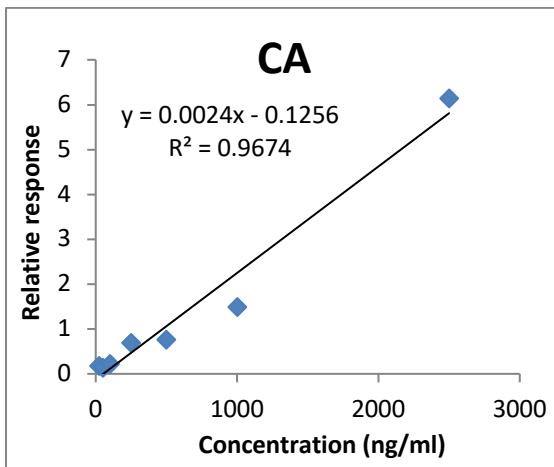

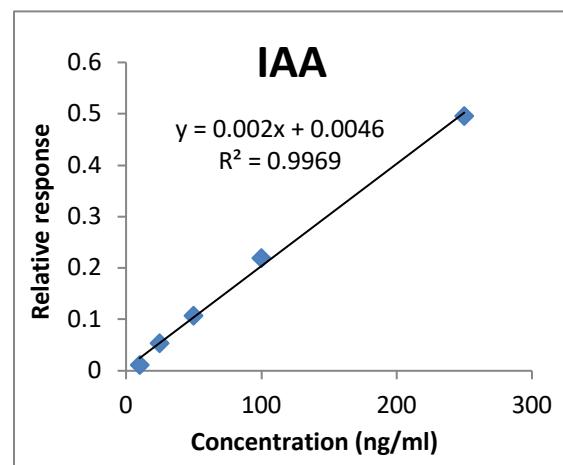

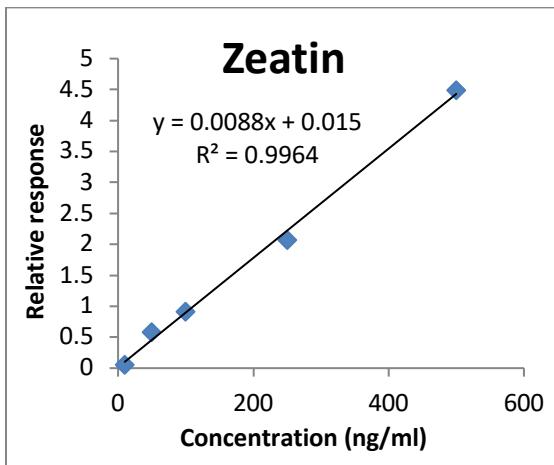

- MS machine: Triple-Quad 6410, Agilent Technologies
- Gas temperature: 250°C
- Gas flow: 13 l/min
- Nebulizer: 55 psi
- Capillary voltage: 5500 V (positive mode) and 4500 V (negative mode)
- MRM transitions

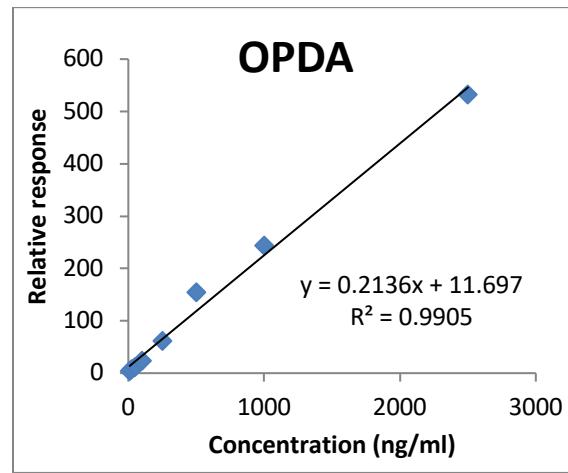

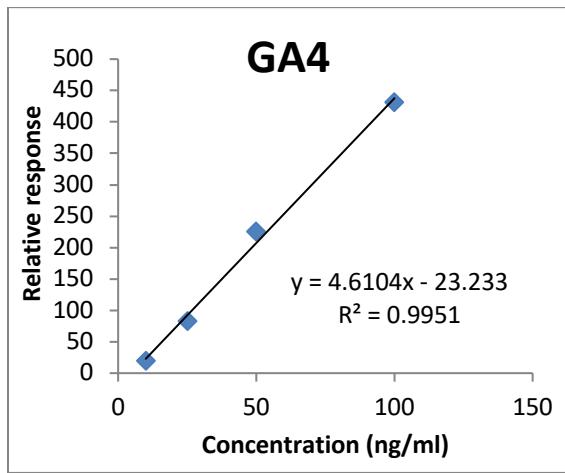

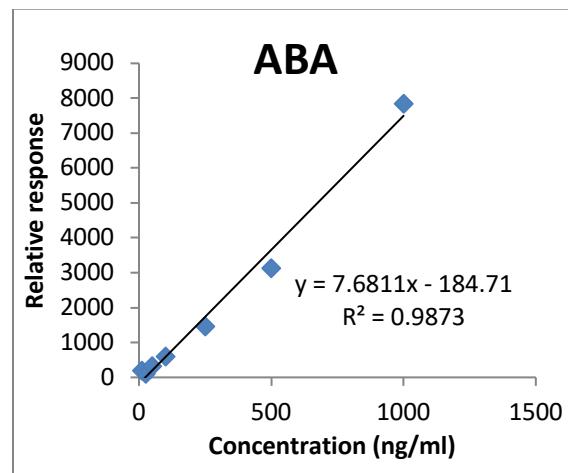

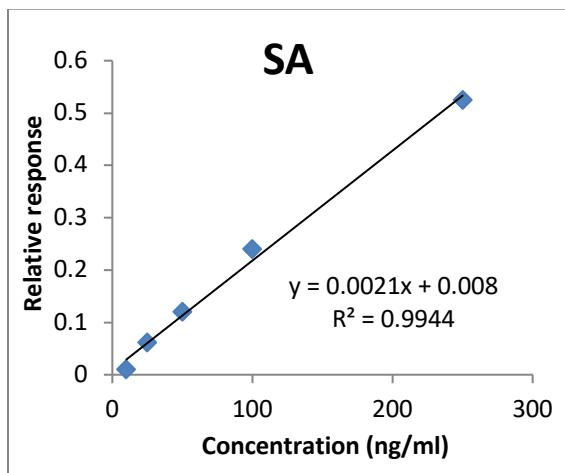

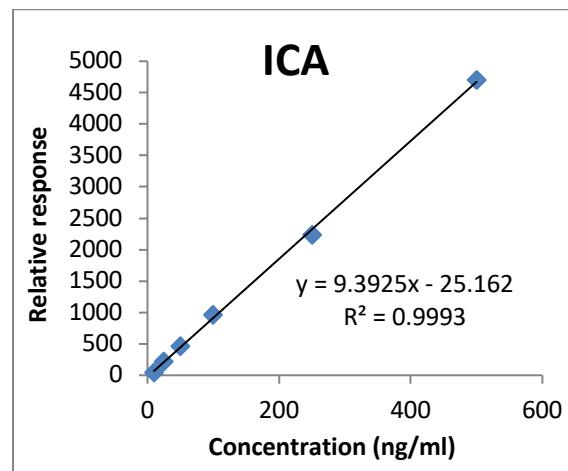

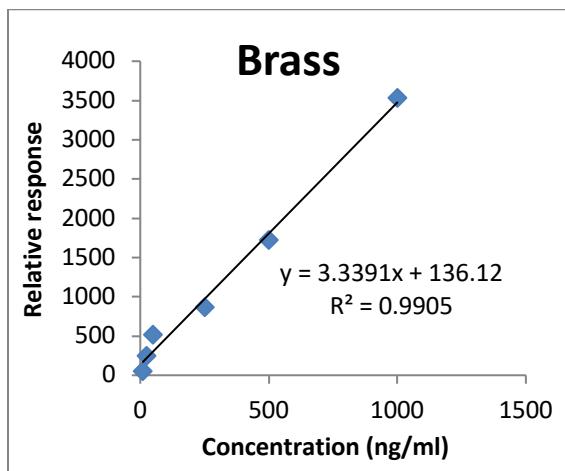

| Compound | Precursor ion (m/z) | Production (m/z) | Retention time (min) | Dwell time (ms) | Collision energy (eV) | Polarity |
|---------------------------|---------------------|------------------|----------------------|-----------------|-----------------------|----------|
| Standards | | | | | | |
| Zeatin | 220.1 | 136.1 | 0.93 | 200 | 14 | Positive |

| H ₂ JA | 211.1 | 59.0 | 5.99 | 200 | 12 | Negative |

- Injection was performed in 3 technical replicates for each sample.
- Calibration curves were created from 4-8 dilutions of commercial standard. The curve is varied in a range of 10-5,000 ng/ml based on concentration of each phytohormone in the samples.
- Concentrations were measured by comparing relative peak area against the standard curve.
