

## Supplementary Materials

**Figure S1.** Targeted gene insertion of CRISPRa vectors into the 3' region of chicken *GAPDH* gene. (A) Gene structure of chicken *GAPDH* gene. Scale bar, 1 kb. (B,C) T7E1 assay and sequencing analysis of DF-1 cells transfected with the all-in-one CRISPR vector targeting the 3' region of chicken *GAPDH* gene (GAPDH#1). (D) Schematic representation of CRISPR/Cas9-NHEJ-mediated CRISPRa vector integration and genomic DNA analysis of targeted gene insertion in chicken DF-1 cells by knock-in-specific PCR and sanger sequencing analysis. Introduction of the donor plasmids containing CRISPRa components and two all-in-one CRISPR vectors targeting CRISPRa vectors (CRISPRa#1) and GAPDH#1 for targeted gene insertion. Blue bars indicate gRNA recognition sequences and red bars indicate protospacer adjacent motif (PAM) sequences. Nucleotide sequences of chicken genomic DNA and the donor plasmid are shown.

**Figure S2.** Principal component analysis (PCA) of bulk RNAseq libraries. **(A)** PCA plot of VPR IRF7 activation and VPR mock cells. **(B)** PCA plot of KRAB IRF7 repression and KRAB mock cells.
