

<b>URINE</b>
# ID
volume in mL
date of collection
date of processing x CFU
# vials
<b>COLLECTION:</b>
pretreatment (Prostate massage/ catheter) NONE
Ethical Y/N
collection method (Mid-stream)/catheter
collection time
collection date
volume collected
collection device
<b>STORAGE</b>
after collection store at 4°C
Transfer to the lab in ice Y/N
arrived at the lab date
hours passed after collection <4h/ <6h
light protection Y/N
Exclusion macrohematuria Y/N
quality -pH Y/N
quality protein level Y/N
<b>PROCESSING</b>
1) homogenize sample before processing Y/N
2) urine centrifugation 3000rpm x 15 min=704 G force
3) centrifugation at 4°C Y/N
4) supernatant: loose pellet pipetting without disturbs Y/N
5) cell pellet stored Y/N
6) register # aliquots CFU
7) Storage at -80°C/ location
8) method freeze: quick -80°C
9) Defrost: in Room temp water bath until defrost

**Supplementary Table S1:** Data collected with the urine samples. Urine collection, processing, and storage.

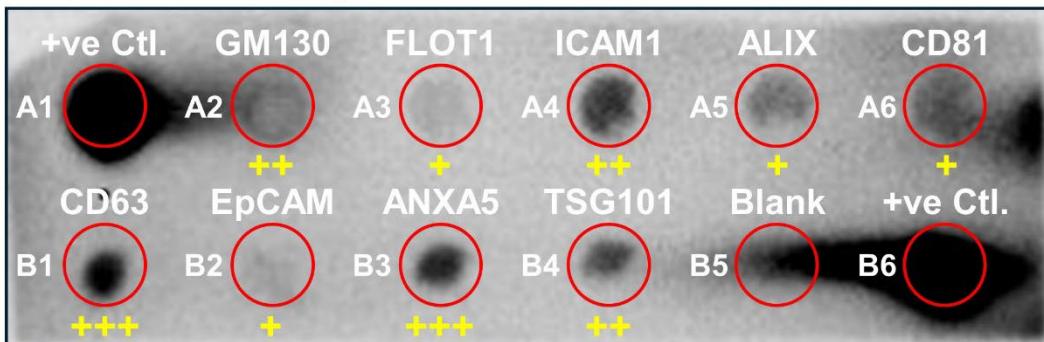

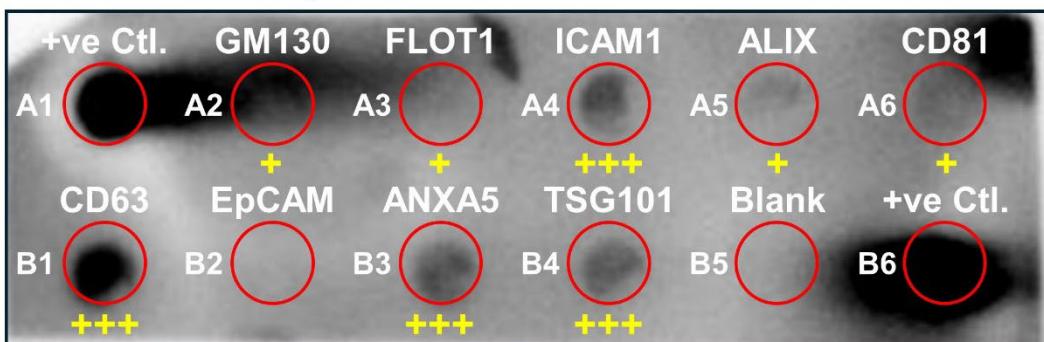

Position	ID	Description	VHL Urine						Control Urine

**Supplementary Table S3:** Selected miRNAs from comparative analyses with FC>2.0 and p-value <0.01.

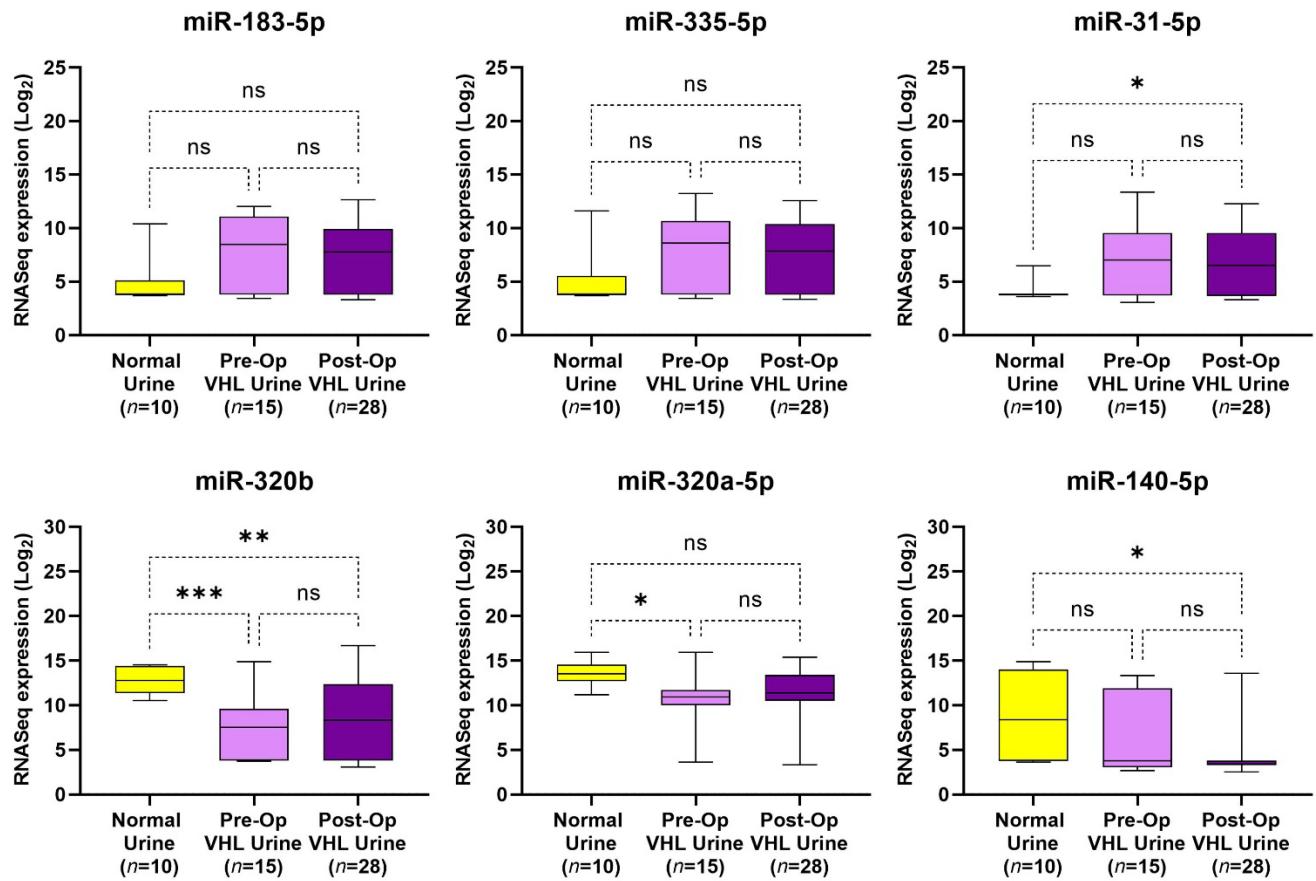

**A****Representative VHL urine****Representative Control urine****B**

CD63 CD81 CD9 TSG101

**Supplementary Figure S1:** Characterization of Exosome Isolates.

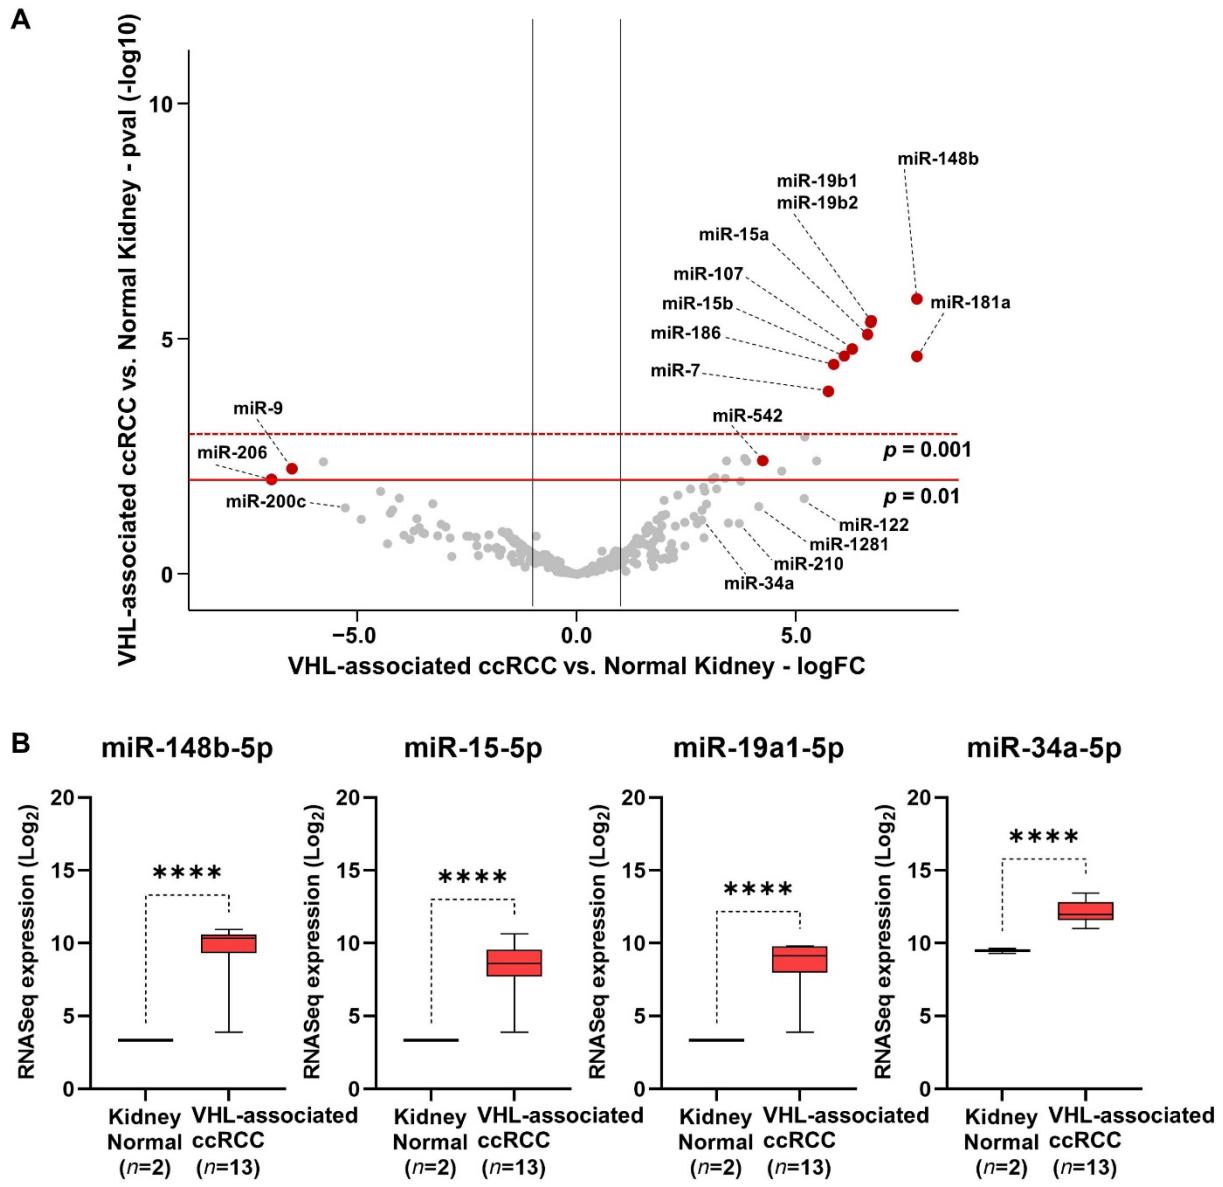

A) Representative VHL-urine and control urine samples for Exosome characterization by Exo-Check® exosome array.

B) Western blot analysis of CD63, CD81, CD9, and TSG101 antibodies for an example of a VHL urine exosome sample.

**Supplementary Figure S2:** Pre- and Postoperative VHL Urine analysis for marker miRNAs.

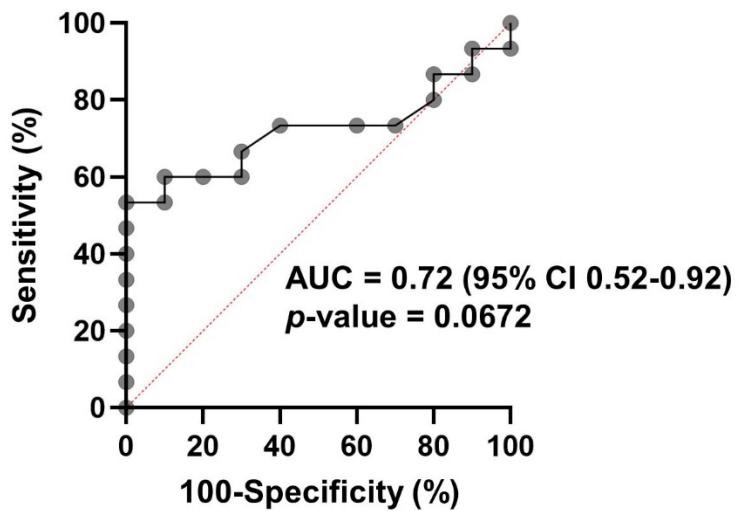

Confirmatory box plots for six selected up- and downregulated miRNAs comparing normal urine exosomes to VHL urine exosomes, with the VHL urines separated into pre- and postoperative urines, one-way ANOVA. \*  $p$ -value  $<0.05$ , \*\*  $p$ -value  $<0.01$ , \*\*\*  $p$ -value  $<0.001$ , ns – not significant

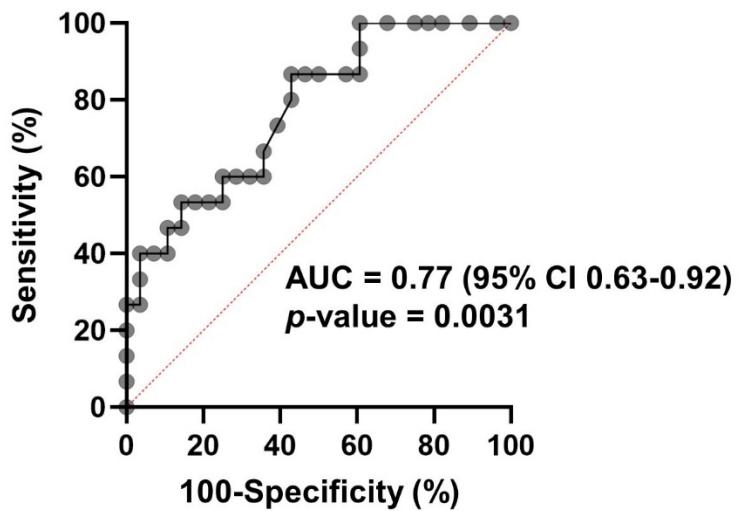

**Supplementary Figure S3:** Differential miRNA expression in VHL-associated ccRCCs

A) Volcano plot analysis comparing 13 VHL-associated ccRCC samples excised from 13 VHL patients within this study compared to normal kidney, consisting of an in-house pool of microdissected FFPE normal kidney. Red line represents  $p=0.01$  and dashed dark red line represents  $p=0.001$ . MiRNAs with  $p$ -values  $> 0.001$  and fold changes  $> 2$  are labeled in red, all other miRNAs are labeled in gray. The gray lines represent log<sub>2</sub> fold-changes of  $-1.0$  and  $1.0$ . B) Selected miRNAs, including miR-15a-5p, with significantly increased expression in VHL-associated ccRCC in comparison to normal kidney, Welch's t-test. \*\*\*\*  $p$ -value  $< 0.0001$

**A Control vs preoperative urines  
for miR-542-5p**

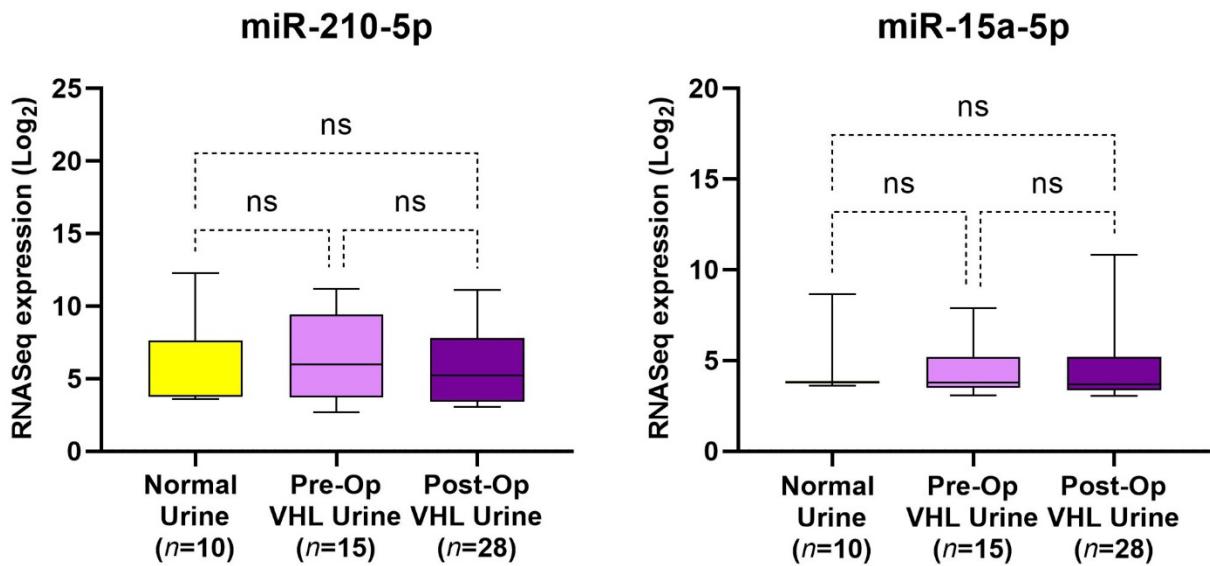

**B Preoperative vs postoperative  
urines for miR-542-5p**

**Supplementary Figure S4. ROC curves for miR-542-5p.**

Receiver operating characteristic (ROC) curves for miR-542-5p demonstrating the comparison between preoperative urines and control urines (A) and between preoperative urines and postoperative urines (B).

**Supplementary Figure S5. Pre- and postoperative VHL urine analysis for known marker miRNAs associated with ccRCC.**

Box plots comparing the expression of known miRNA markers of sporadic ccRCC within the normal urine exosomes and the VHL urine exosomal miRNA, with the VHL urines separated into pre- and postoperative urines, one-way ANOVA. ns – not significant
