(A) Northeast China

(B) East China

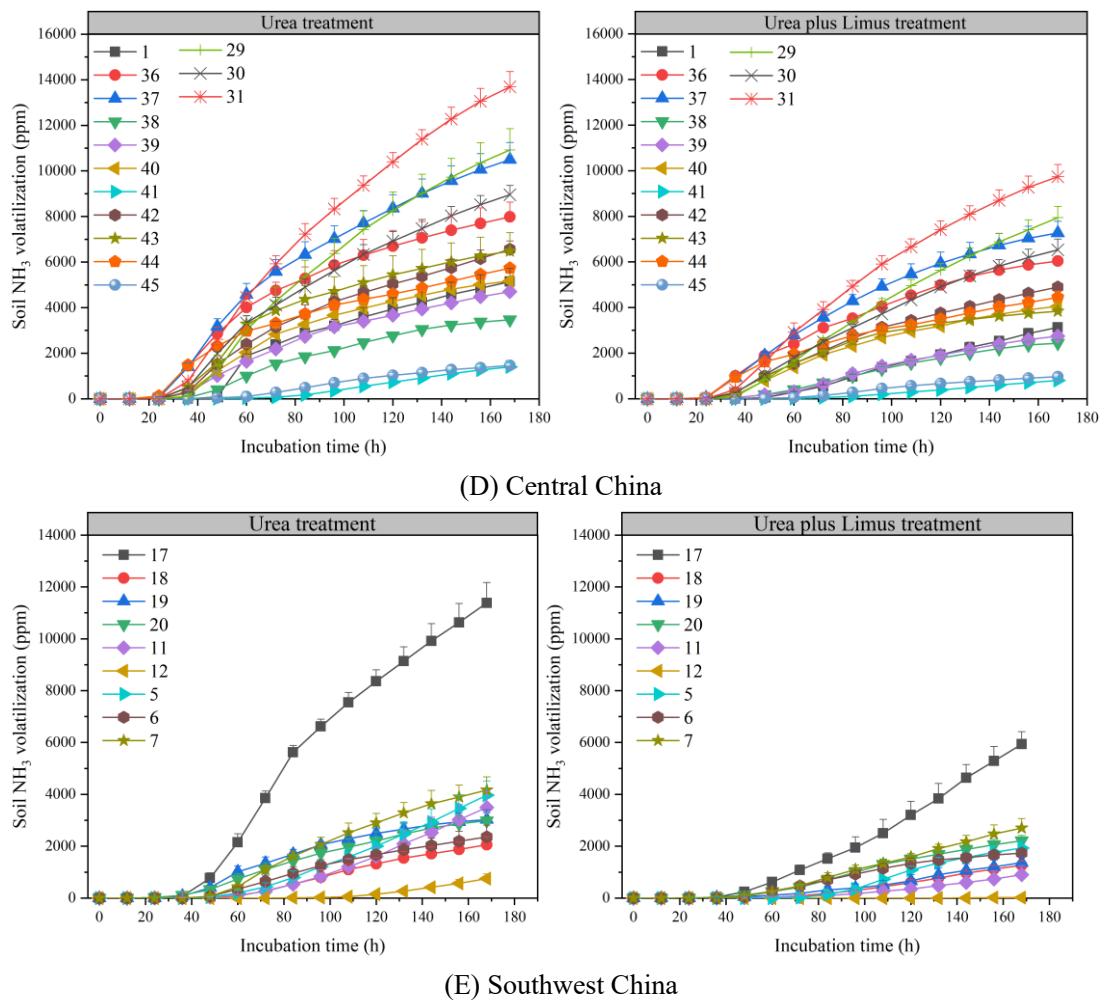

Figure S1. Dynamics of NH₃ loss after fertilizer application to 50 flooded paddy soils in China
Numbers in the figures indicated the code for each paddy soil, as detailed in Table S1.

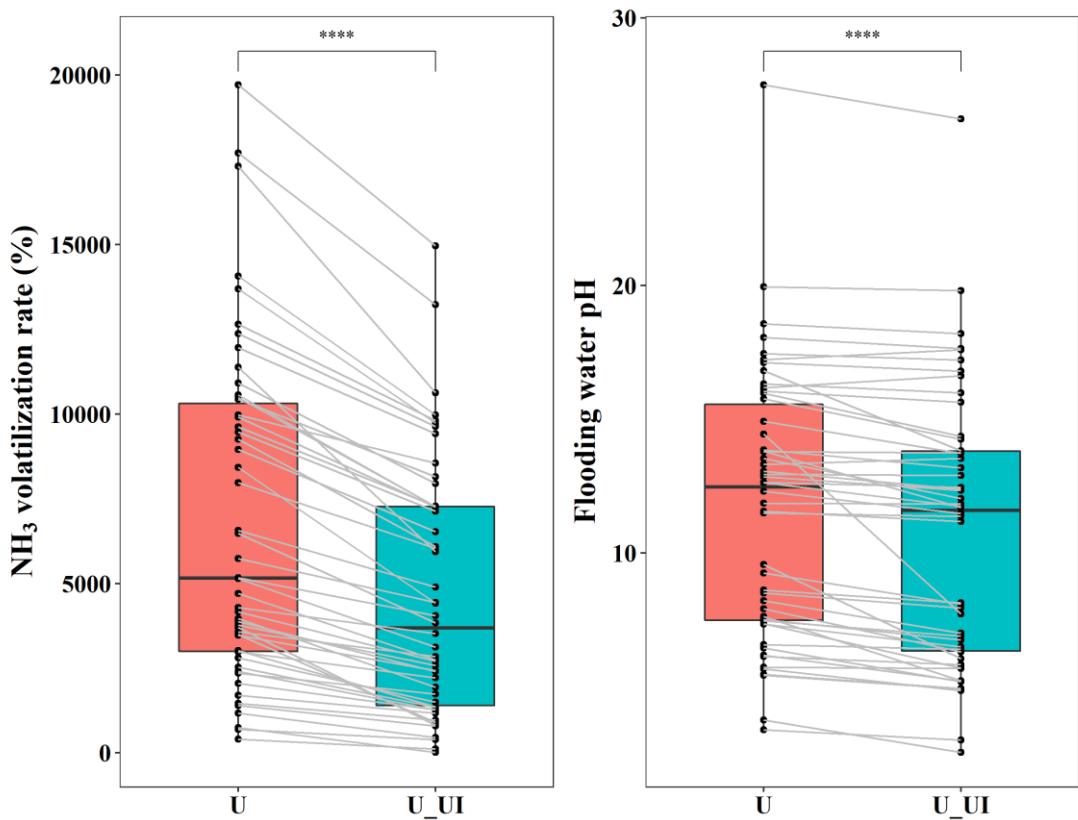

Figure S2. Differences in NH₃ loss potential and changes in flooding water pH under the two treatments: urea (U) and urea plus the Limus® inhibitor (U_UI). Asterisks show significant differences between treatments, with *, **, and *** indicating significance levels at 0.05, 0.01, and 0.001, respectively.

Table S2 List of literature used in the data synthesis
