

Table S1. Soil physical and chemical characteristics in eight plots of a 70-year-old abandoned quarry (Plots A-E: quarry floor, F-H: quarry top), a recently decommissioned reference quarry (Q1), and an urban forest reference site (UF). Study sites are located in Jefferson City, Missouri, USA. Values represent the mean and standard deviation (SD) of 20 measurements per plot. BulkD – bulk density in g cm⁻³; Silt/Clay, Sand and Gravel represent particle size distribution in %; element concentrations are in mg per kg of dry soil.

Table S2. Microclimate in eight plots of a 70-year-old abandoned quarry (Plots A-E: quarry floor, F-H: quarry top), a recently decommissioned reference quarry (Q1), and an urban forest reference site (UF). Study sites are located in Jefferson City, Missouri, USA. Values are based on daily data (with each data point representing the mean of 24 hourly values) collected from 1 May – 30 September 2011. Rs – shortwave solar radiation, Rh – relative humidity, Ta – air temperature, VWC – volumetric soil water content, Ts – soil temperature, EC – soil electric conductivity.

Table S3. Species cover ($\text{dm}^2 \text{ m}^{-2}$, %) in each study plot: Q1 – recently decommissioned quarry, A–E – quarry floor and F–H – quarry top of a quarry abandoned 70 years ago, and UF – urban forest in Jefferson City, Missouri, USA. Highlighted fields denote the three species <1 m in height with the greatest cover in each plot. Nomenclature is from Steyermark's Flora of Missouri; common names are from the Flora of North America if they were not given in the Flora or Missouri. C is the Coefficient of Conservatism; an asterisk with a value of 0 for C indicates an exotic species.
