

**Figure S1.** Stable expression of SST receptors with GIRK2 expression in HEK293 cells. Red staining (Cy3) confirms SST receptor expression in cells and green color represents GIRK2 expression. 40× magnification; bar = 20  $\mu$ m. GIRK = G protein-coupled inwardly rectifying potassium; SST = somatostatin.

**Figure S2.** SS14-induced fluorescent traces from HEK293 cells expressing SST receptors and GIRK2. GIRK = G protein-coupled inwardly rectifying potassium; RFU = relative fluorescence units; SST = somatostatin.
