In the original article [1], there was a mistake in Figure 2 as published, namely the graph showing the levels of lipid peroxidation in the ovary was inserted twice and, at the same time, the graph showing the levels of lipid peroxidation in the spleen was not inserted at all. The corrected Figure 2 appears below.

**Figure 2.** Lipid peroxidation, measured as MDA + 4-HDA level, in homogenates of porcine tissues (thyroid, ovary, spleen, liver, brain, small intestine, kidney), incubated without any substance (control; white bars), or with melatonin (5 mM) (grey bars), or with  $KIO_3$  (20; 15; 10; 7.5; 5.0 mM) (black bars), or with  $KIO_3$  (20; 15; 10; 7.5; 5.0 mM) + melatonin (5 mM) (striped bars). ●— $p < 0.05$  vs. respective control (either without any substance or with melatonin); \*— $p < 0.05$  vs.  $KIO_3$  in the same concentration.
