## ABSTRACT

The chemical investigation of *Homotrigona apicalis* propolis collected in Binh Dinh province, Vietnam lead to the isolation of nine compounds, including four sesquiterpenes: spathulenol (**1**),  $1\alpha\text{H},5\beta\text{H}$ -aromandendrane- $4\beta,10\alpha$ -diol (**2**),  $1\beta, 6\alpha$ -Dihydroxy- $4(15)$ -eudesmene (**3**) and  $1\beta\text{H},5\beta\text{H}$ -aromandendrane- $4\alpha,10\beta$ -diol (**4**), three triterpenes: acetyl oleanolic acid (**5**),  $3\alpha$ -hydroxytirucalla- $8,24$ -dien- $21$ -oic acid (**6**) and ursolic acid (**7**), two xanthones: cochininchinone A (**8**) and  $\alpha$ -mangostin (**9**). Sesquiterpens **1–4** and triterpene **6** were isolated for the first time from stingless bee propolis. In the antibacterial activity evaluation, the EtOH extract only showed moderate activity on *S. aureus* but isolated compounds **7–9** showed good antibacterial activity with IC<sub>50</sub> values of 0.56 to 17.33  $\mu\text{g}/\text{mL}$ . The EtOH extract displayed selective cytotoxicity against A-549 cancer cell line with IC<sub>50</sub> values of  $22.82 \pm 0.86 \mu\text{g}/\text{mL}$ , while xanthones **8** and **9** exhibited good activity against KB, HepG-2 and A-549 cancer cell lines with IC<sub>50</sub> values range from  $7.55 \pm 0.25$  to  $29.27 \pm 2.07 \mu\text{g}/\text{mL}$ . Cytotoxic effects of xanthone **8** and **9** are proposed by the inhibition of the EGFR and HER2 pathways using molecular docking study. Compounds **5**, **8** and **9** showed potential  $\alpha$ -glucosidase inhibitory activities, that was further confirmed by computational studies.
