Supplementary Table S1. Methotrexate treated cohort SNP association with laboratory and clinical features. Descriptive statistics summary across n=66 methotrexate treated participants, showing specified polymorphism genotype group means and ANOVA analyses. Statistically significant ($p < 0.05$) associations highlighted in grey subsequently had p values adjusted for multiple testing (Table 3). ESR: erythrocyte sedimentation rate; DAS28: disease activity score across 28 joints; RBC, red blood cell (count); Hb: haemoglobin; WBC: white blood cells; ALT: alanine aminotransferase; AST: aspartate aminotransferase; ALP: alkaline phosphatase; SD: Standard deviation.

SNP	Metabolite (time pt.)	Units	Mean	±SD	Mean	±SD	Mean	±SD	ANOVA p value	Genotype Comparison	Bonferroni p value	Summary

Supplementary Figure S1. Sulfasalazine treated cohort SNP associations. Plasma sulfapyridine (SPY) metabolite concentration which had statistically significant associations with the rs17421511 polymorphism in n=27 sulfasalazine treated participants. (A) Mean data for each genotype group with number of individuals per group (n=) indicated. Statistically significant differences between genotype group means were initially assessed by ANOVA and then adjusted by Bonferroni’s multiple comparison test performed for specified genotype group mean comparisons; asterisk used to summarise p values: (*) p<0.05. (B) 6 weeks follow up plasma concentration of sulfapyridine metabolite. Statistically significant differences between genotype group means are indicated by horizontal bars. Unlisted features had no statistically significant association with any SNP. Red horizontal bar represents genotype group mean; error bars represent standard deviation. BL: baseline; 6wk: six weeks follow up; SD: standard deviation; ns: not significant.

Supplementary Table S2A. Methotrexate treated cohort prescription data. Mean methotrexate (mg/week) prescribing data per genotype group for the four polymorphisms rs4149081, rs1476413, rs2231142 and rs17421511, in n=66 methotrexate treated participants at baseline and 6 weeks follow up. SD: standard deviation.

		n prescribed	median MTX dose/ mg per week (range)	n prescribed HCQ	median HCQ dose/ mg per day (range)	n prescribed LFD	median LFD dose/ ng per day (range)	n prescribed SFZ	median SFZ dose/ mg per day (range)
Methotrexate prescribed subgroup A (n=66)	Baseline	66	20 (7.5-25)	26	200 (200-400)	-	-	11	1000 (500-1000)
	6 weeks	51	20 (10-25)	20	200 (-)	-	-	9	1000 (500-1000)
Sulfasalazine prescribed subgroup B (n=27)	Baseline	11	20 (15-25)	5	200 (-)	2	200 (-)	27	1000 (500-1000)
	6 weeks	13	20 (10-25)	3	200 (-)	2	200 (-)	25	1000 (500-1000)

Supplementary Table S2B. Methotrexate and sulfasalazine treated subgroup co-prescription data. Median prescribing and co-prescribing data per study subgroup, in a subgroup of n=66 methotrexate and a subgroup of n=27 sulfasalazine treated participants at baseline and 6 weeks follow up.
