**Supplemental Materials**

Figure S1. Seasonal captures of *H. halys* adults at each field site from 6 June to 26 September 2016. Bars with shared letters are not significantly different from each other at α = 0.05 (χ^2 mean contrast with Bonferroni correction). Sites were classified according to relative population densities found at each site and grouping was based on the results of the post-hoc test. Data were pooled across all trap and lure treatments.

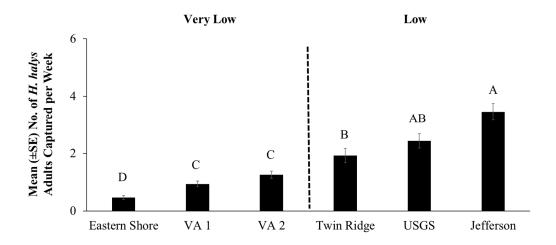

Figure S2. Captures of *H. halys* adults at each field site from 5 June to 4 September 2017. Bars with shared letters are not significantly different from each other at α = 0.05 (χ^2 mean contrast with Bonferroni correction). Sites were classified according to relative population density found at each site and grouping was based on the results of the post-hoc test. Data were pooled across all treatments.
