

Appendix 4

The Quality appraisal results of the studies conducted using the CASP tool revealed the following findings:

| Article / Reference | Did the review address a clearly focused question? | Did the authors look for the right type of papers? | Do you think all the important, relevant studies were included? | Did the review's authors do enough to assess quality of the included studies? | If the results of the review have been combined, was it reasonable to do so? | What are the overall results of the review? | How precise are the results? | Can the results be applied to the local population? | Were all important outcomes considered? | Are the benefits worth the harms and costs? | Score out of 10 |
