

Supplementary Figure 1. Phytoplasma detection in ten leafhoppers by semi-nested polymerase chain reaction (PCR) amplification of 16S rRNA gene with universal primer pair P1/16S-SR (Direct PCR), followed by amplification with primers P1A/16S-SR (Semi-nested PCR). Ten samples include LH078-1, LH82-1, LH102-1, LH133-1, LH139-1, LH143-1, LH078-12, LH082-2, LH098-1, and LH143-5 M: Marker (1Kb DNA ladder); water was used as negative control.

Supplementary Table 1. Detection of phytoplasmas in 76 leafhopper samples by semi-nested polymerase chain reaction (PCR), including 56 quantitative PCR (qPCR) screened and 20 untested leafhopper samples.

\* represents the leafhopper samples that were detected phytoplasma-positive by qPCR [24]. Bolded leafhopper samples (including \*) were detected phytoplasma-positive by semi-nested PCR.
