

Table S1. Visual colored-based drug interactions between anti-*Helicobacter pylori* drugs and antiretrovirals.

Antiretrovirals	Pantoprazole	Lansoprazole	Esomeprazole	Omeprazole	Rabeprazole	Amoxicillin	Clarithromycin	Bismuth (sous citrate)	Tetracycline	Metronidazole	Ciprofloxacin	Levofloxacin	Rifabutin
Abacavir													
Didanosine													
Emtricitabine													
Lamivudine													
Stavudine													
Zidovudine													
Tenofovir													TDF
Efavirenz													
Etravirine													
Névirapine													
Doravirine													
Rilpivirine													
Atazanavir													
Darunavir													
Cobicistat													
Fosamprenavir													
Ritonavir													
Saquinavir													
Tipranavir													
Lopinavir													
Enfuvirtide													
Maraviroc													
Raltegravir													
Dolutegravir													
Elvitegravir													
Bictegravir													
Cabotegravir (oral)													
Fostemsavir													
Delavirdine													

Color legend

	Recommended
	Not recommended
	Caution, may be not recommended for <i>H. pylori</i> eradication
	Not studied, may be recommended
?	Clinical significance is uncertain, Monitor for adverse effects of both drugs
	Bismuth has not been studied, may be recommended
*	Poten
!	Risk of QT interval prolongation, an electrocardiogram is requested

TDF Tenofovir disoproxil Furamate

The online version of this table 1 is presented with comments for drug interactions
