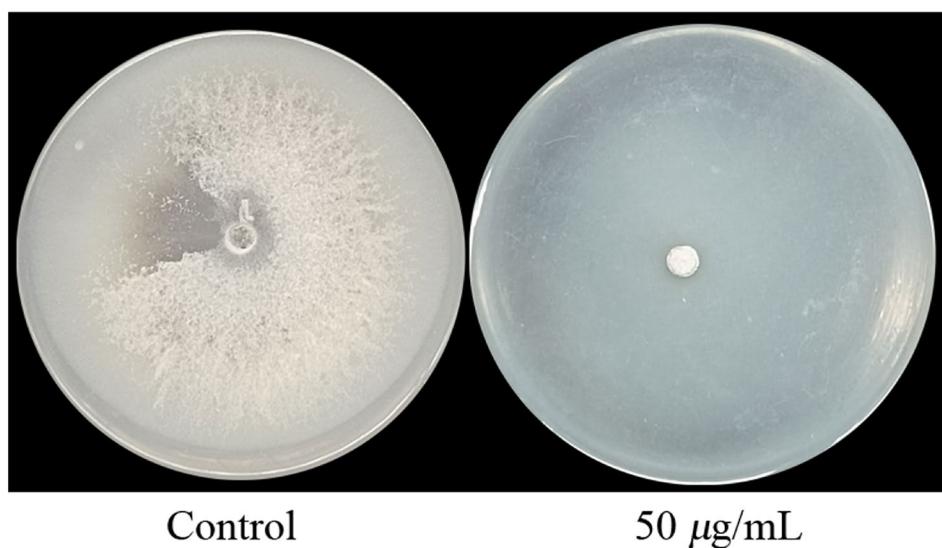

Figure S1. Effects of crude extract of *Streptomyces* sp. SN5452 on the mycelial growth of *P. oryzae*

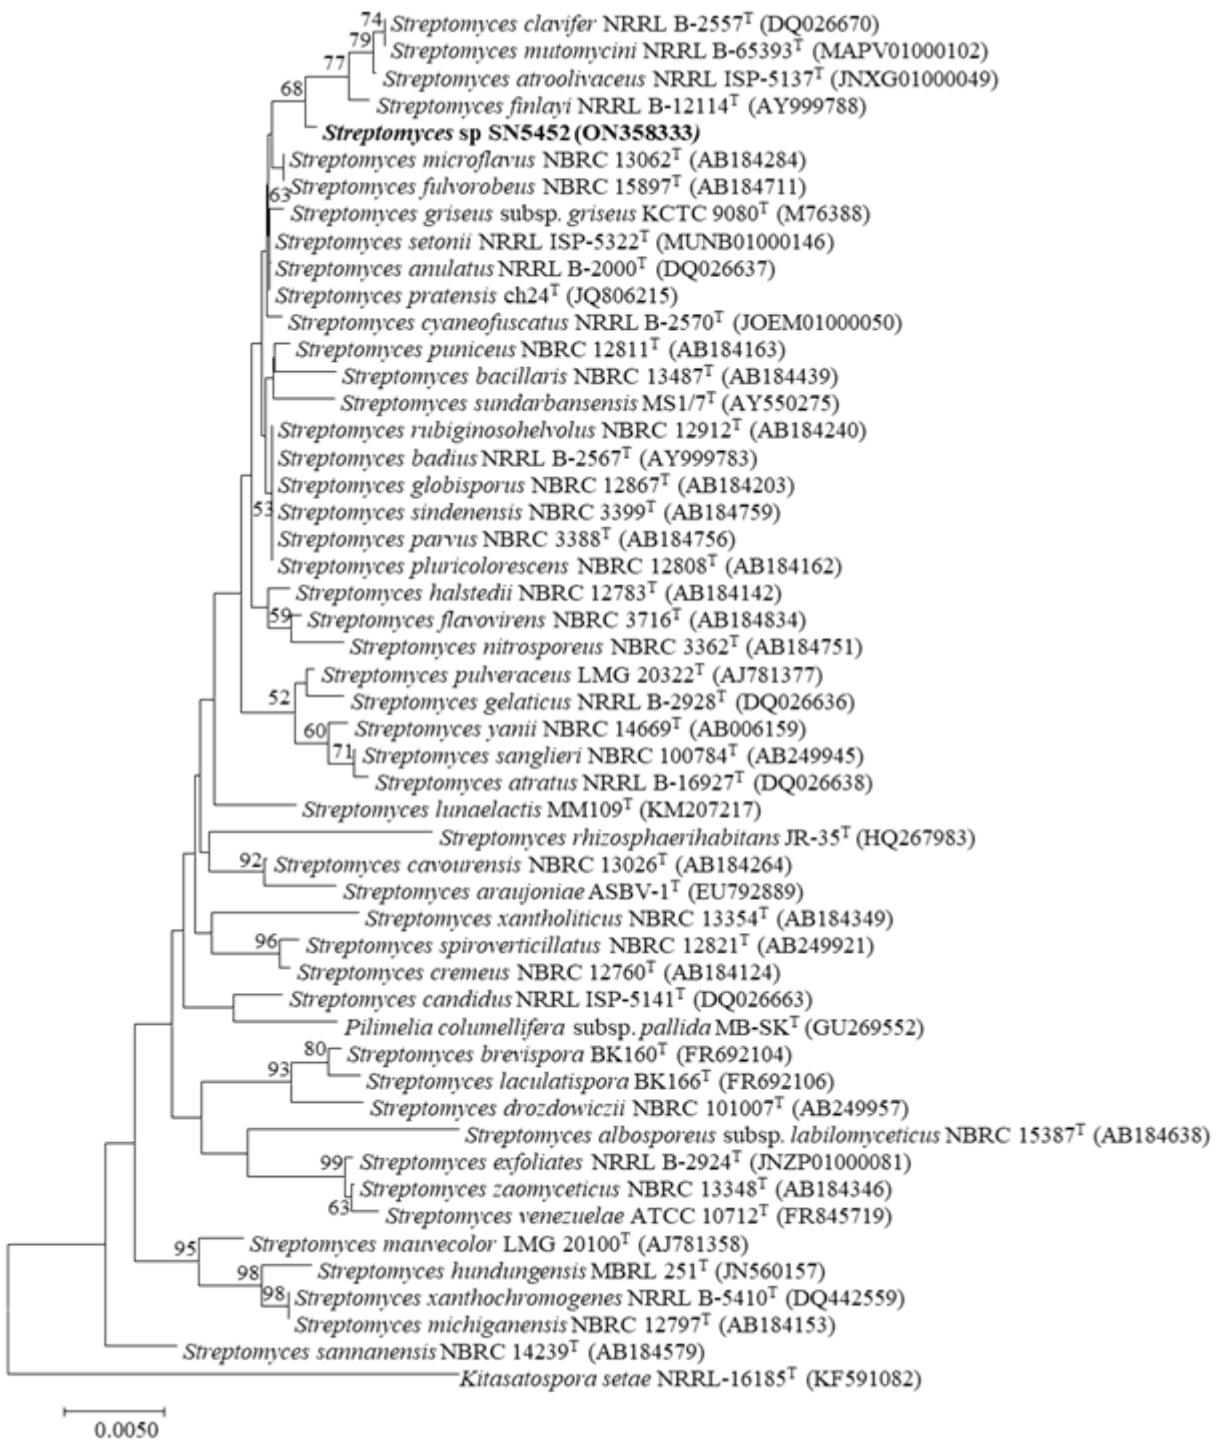

Figure S2. Neighbour-joining phylogenetic tree based on the 16S rRNA gene sequences with members of the genus *Streptomyces*. Bootstrap values (expressed as percentages of 1000 replications) of above 50 % are shown at branch points. GenBank accession numbers are given in parentheses. *Kitasatospora setae* NRRL-16185^T was used as the outgroup. Bar, 0.005 substitution per nucleotide position.
