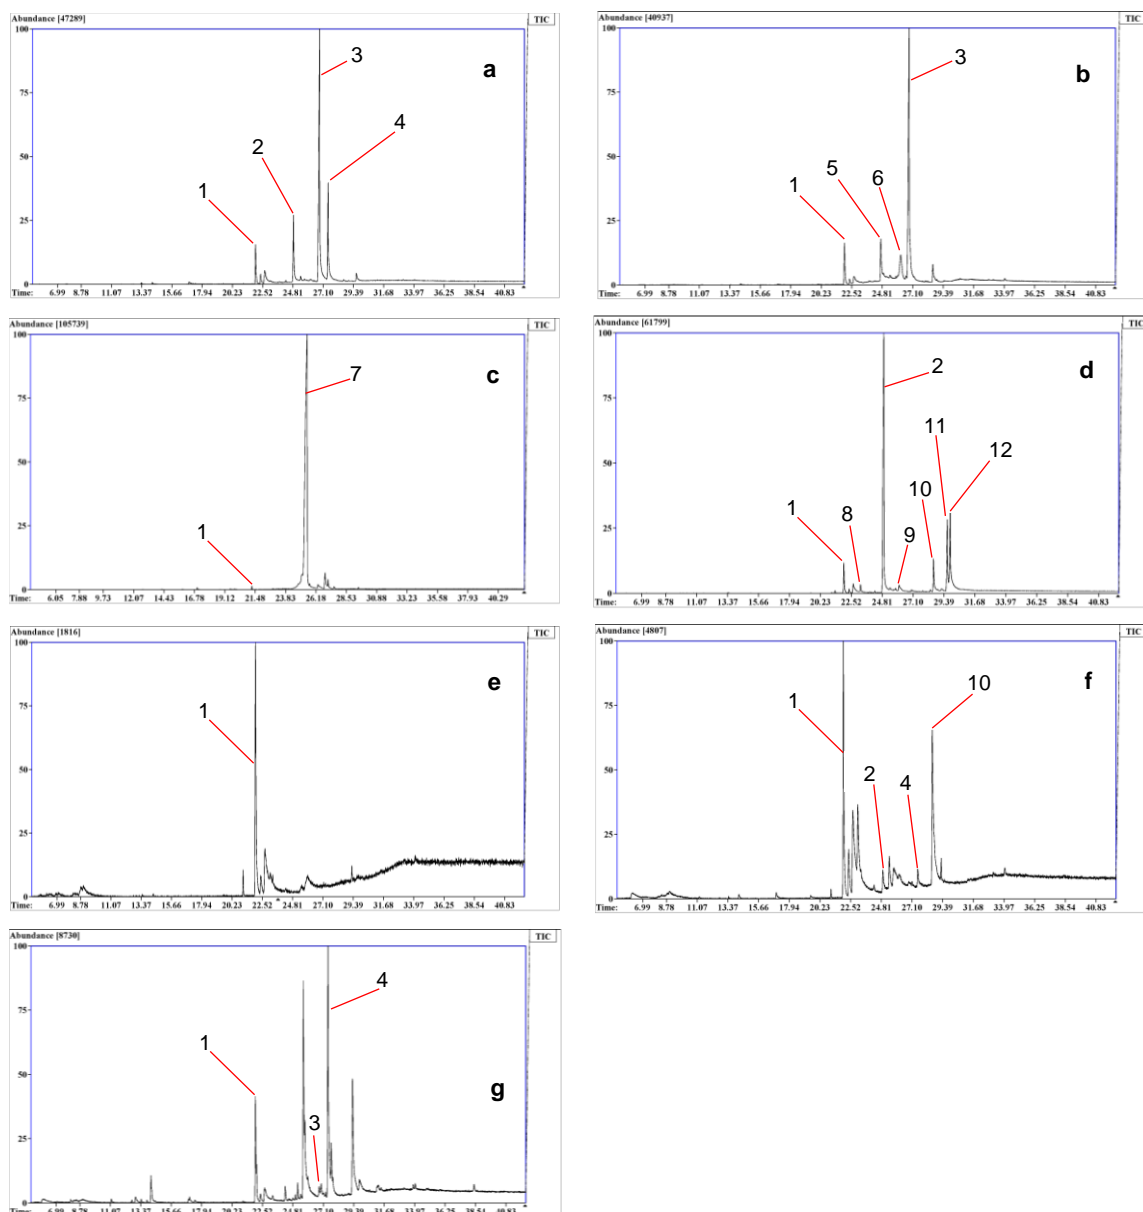

Figure S1. GC-MS chromatograms of *Hippeastrum* BAREs

a: *H. aglaiae*; b: *H. aulicum*; c: *H. glaucescens*; d: *H. hybrid*; e: *H. petiolatum*; f: *H. puniceum*; g: *H. reticulatum*.

The signals related to the identified alkaloids are indicated on each chromatogram: (1) codeine, (2) montanine, (3) lycorine, (4) 8-*O*-demethylhomolycorine, (5) 11,12-dehydroanhydrolycorine, (6) hamayne, (7) tazettine, (8) 4-*O*-methylnangustine, (9) pancracine, (10) hippeastrine, (11) 2-OH-homolycorine, (12) 7-OH-clivonine. The alkaloids galantamine and norlycoramine were detected in low amounts in *H. hybrid* and *H. aglaiae*, respectively.

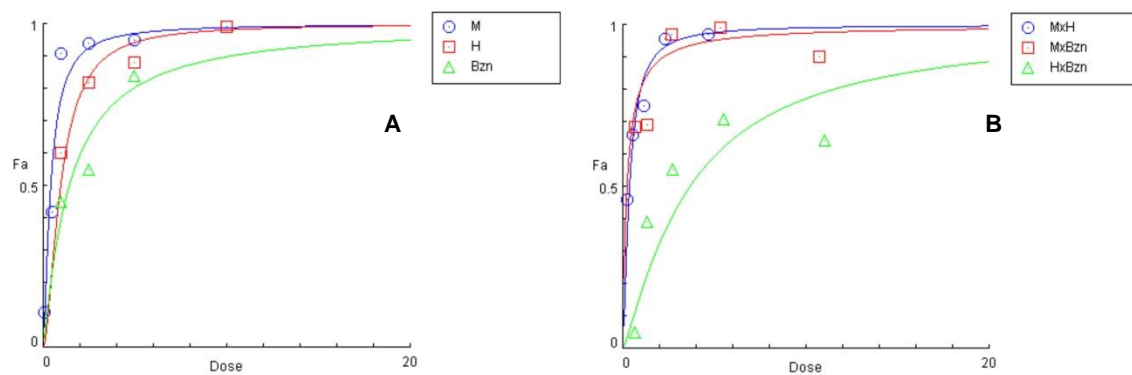

Figure S4. The dose-effect curves of single drugs (A) and drug combos (B).

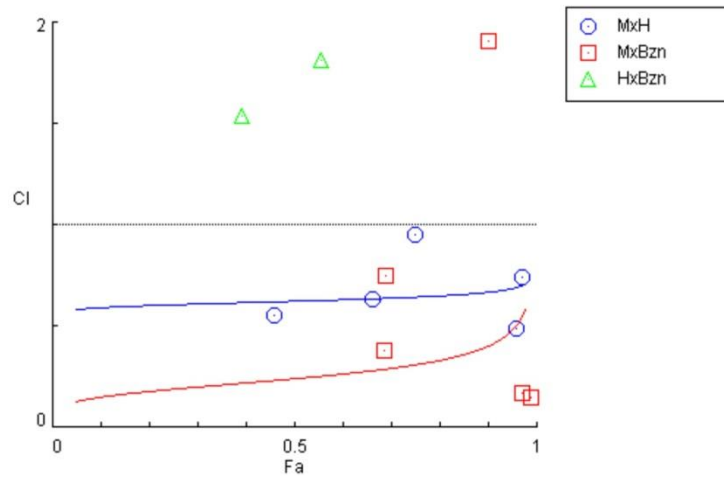

Figure S5. Chou-Talalay method Fa-CI plot of montanine, *H. hybrid* BARE, and Bzn.

CI was plotted on y-axis as a function of fractional effect (Fa) on the x-axis to assess drug synergism. $CI < 1$, $CI = 1$ and $CI > 1$ indicate synergism, additivity, and antagonism, respectively.
