

Figure S5. Gene expression of wild-type JH2010 and JH2016 by RT-qPCR. Relative transcription of genes from overnight LB-YE cultures of JH2010 and JH2016 as measured by RT-qPCR. Results are graphed as mean log fold-change from *gyrB* transcript \pm SD ($n = 8$). Significance was calculated by one-way ANOVA with Šídák's test for multiple comparisons.
