

Supplemental Figure S1. Alpha diversity of plasma microbiome in AA and CA groups.

Alpha diversity of plasma microbiome at genus (A) and species (B) levels was compared between

AA (N=22) and CA (N=16) groups. $P < 0.05$ were considered statistically significant.

A**Genus p = 0.96****B****Species p = 0.5**

Supplemental Figure S2. Beta diversity of plasma microbiome in AA and CA groups.

Beta diversity of plasma microbiome at genus (A) and species (B) levels was compared between AA (Black, N=22) and CA (White, N=16) groups. $P < 0.05$ were considered statistically significant.
