

**Table S1.** Strains and plasmids used in this study.

	Description of strains and plasmids	Source
<i>S. oneidensis</i>		
MR-1	Wild-type	ATCC
$\Delta ygfY$	MR-1 derivative with deletion of SO_1339	This study
$\Delta ygfX$	MR-1 derivative with deletion of SO_1340	This study
$\Delta ygfYX$	MR-1 derivative with double deletion of SO_1339 and SO_1340	This study
$\Delta sdh$	MR-1 derivative with deletion of SO_1927, SO_1928 and SO_1929	This study
<i>E. coli</i>		
JM109	General cloning host for plasmid manipulation	Lab stock
WM3064	Auxotrophic to DAP; used for conjugation	[16]
MG1655	Wild type	ATCC
BL21	Expression host carrying the T7 RNA polymerase	Novagen
BTH101	F-, cya-99, araD139, galE15, galK16, rpsL1 (Str r), hsdR2, mcrA1, mcrB1.	Euromedex
<b>Plasmid</b>		
pRE112	Suicide vector, Cm <sup>r</sup>	[15]
pRE-ygfY	pRE112 derivative to delete ygfY	This study
pRE-ygfX	pRE112 derivative to delete ygfX	This study
pRE-sdh	pRE112 derivative to delete sirCD	This study
pBBP1	Constitutive expression vector in <i>Shewanella</i>	This study
pBBP1-ygfY <sup>G16R/E19A</sup>	pBBP1 derivative to express ygfY	This study
pBBP1-ygfY	pBBP1 derivative to express ygfY	This study
pKT25	C-terminal fusion of the target protein to the T25 fragment of adenylylate cyclase	Euromedex
pKNT25	N-terminal fusion of the target protein to the T25 fragment	Euromedex
pUT18	N-terminal fusion of the target protein to the T18 fragment of adenylylate cyclase	Euromedex
pUT18C	N-terminal fusion of the target protein to the T18 fragment	Euromedex
pKNT25-ygfX	pKNT25 derivative to express YgfX fused with T25 in its N-terminal	This study
pKT25-ygfX	pKT25 derivative to express YgfX fused with T25 in its C-terminal	This study
pUT18-mreB	pUT18 derivative to express MreB fused with T18 in its N-terminal	This study
pUT18C-mreB	pUCT18 derivative to express MreB fused with T18 in its C-terminal	This study
pUT18-ftsZ	pUT18 derivative to express FtsZ fused with T18 in its N-terminal	This study
pUT18C-ftsZ	pUT18 derivative to express FtsZ fused with T18 in its C-terminal	This study
pUT18-ygfY	pUT18 derivative to express YgfY fused with T18 in its N-terminal	This study
pUT18C-ygfY	pUCT18 derivative to express YgfY fused with T18 in its C-terminal	This study
pET-28a(+)	Expression vector in <i>E. coli</i> under induction of IPTG	Novagen
pBAD24	Expression vector in <i>E. coli</i> under induction of L-arabinose	[17]
pET-ygfY	pET-28a(+) derivative to express YgfY	This study
pBAD-ygfX	pBAD24 derivative to express YgfX	This study

a. FC indicates fold change of transcription in  $\Delta ygfY$  compared with wild-type.

**Figure S1**

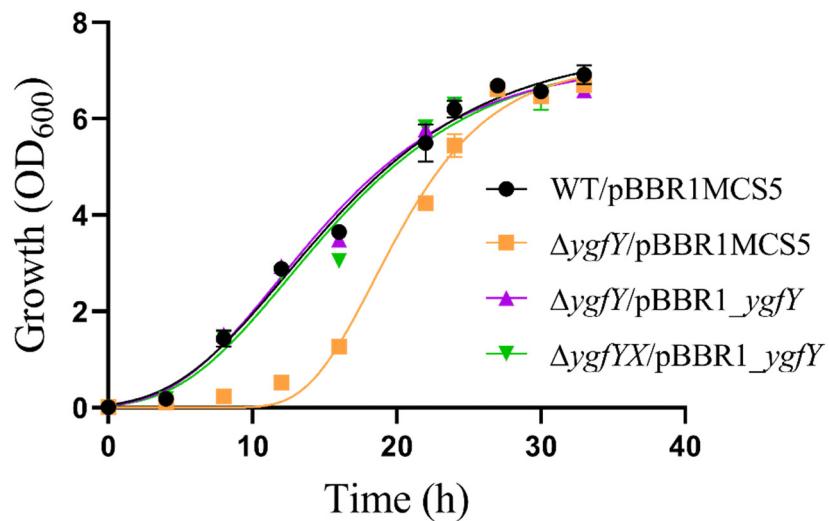

**Figure S1.** Growth of *ygfY* mutant and wild-type strains at 30 °C. The data are the mean ± SD ( $n = 3$ ).

**Figure S2**

**Figure S2.** Cell morphology of  $\Delta ygfY$ ,  $\Delta ygfX$ ,  $\Delta ygfYX$  and WT. Stains were cultured in LB at 16 °C for 48 h and subjected to observation under a microscope.

**Figure S3**

**Figure S3.** YgfY expressed from its native promoter revered the growth defect of  $\Delta ygfY$ . Region containing *ygfY* coding sequence and 285 bp upstream was cloned into pBBP1MCS5 to express *ygfY* from its native promoter. Resulted plasmid pBBR1\_ygfY was then transformed into strains of *Shewanella*. Strains transformed with the empty vector pBBP1MCS5 were set as controls. The data are the mean  $\pm$  SD ( $n = 3$ ).

**Figure S4**

**Figure S4.** Expression of YgfY and YgfY<sup>G16R/E19A</sup>. YgfY and YgfY<sup>G16R/E19A</sup> were fused with GST, and were expressed in  $\Delta$ YgfY using pBBP1. Strains were cultured at 16 °C for 48 h, and collected for the analysis of western blotting. Blank control indicated sample of  $\Delta$ YgfY/pBBP1.
