

Figure S3. Effect of grazer density on the abundance of different size classes (<10 , $10-100$, $100-1,000$, $1,000-10,000$, $10,000-100,000$, $>100,000 \mu\text{m}^3$) (modeled with GLM, family GAMMA, link=log). Grey area shows 95% C.I. $^* = p < 0.05$
