Supplementary Table S1. Description of functional traits and categories.

Trait	Description	Categories
Trophic level	The position in the food chain is determined by the number of steps that energy is transferred to that level, from 2(for herbivores) to	2 (herbivore) to 4.5 (piscivore)
Maximum total length (cm)	The maximum length between the first and last points of the whole body, in a straight line, does not exceed the curve of the body.	Non-migratory Restricted migratory Long-distance migration

Mobility	The ability or tendency to move from one position or situation to another one	Sedentary Mobile within reefs Mobile across reefs
School size	The size of the fish population, generally measured by the number of individuals.	Solitary Pairing Small schools Large schools
Water column position	Preferred vertical position in the water column for living and feeding.	Benthic (0-3 m) Benthopelagic (3-10m) Pelagic (10-30 m) Demersal (>30 m)
Habitat type	Preferred habitats, do not mean that it does not occur in other habitats.	Estuarine Stream Mangrove Seagrass Coral Reed Open area
