

Full blot FTH1: Representative immunoblot analysis of FTH1 (21 KDa) performed on total protein lysates of two non-neoplastic canine testis samples.

Full blot NCOA4: Representative immunoblot analysis of NCOA4 (70 KDa) performed on total protein lysates of two non-neoplastic canine testis samples.

Representative immunoblot analysis of β -Actin (45 KDa) performed on total protein lysates of two non-neoplastic canine testis samples in a stripped blot. 60 μ g of lysates were loaded for each sample, whose tag is reported on the right of the membrane.
