

Let-7b, miR-29b and miR-125b as potential biomarkers for differentiating canine mammary carcinoma histological types

Supplementary Material

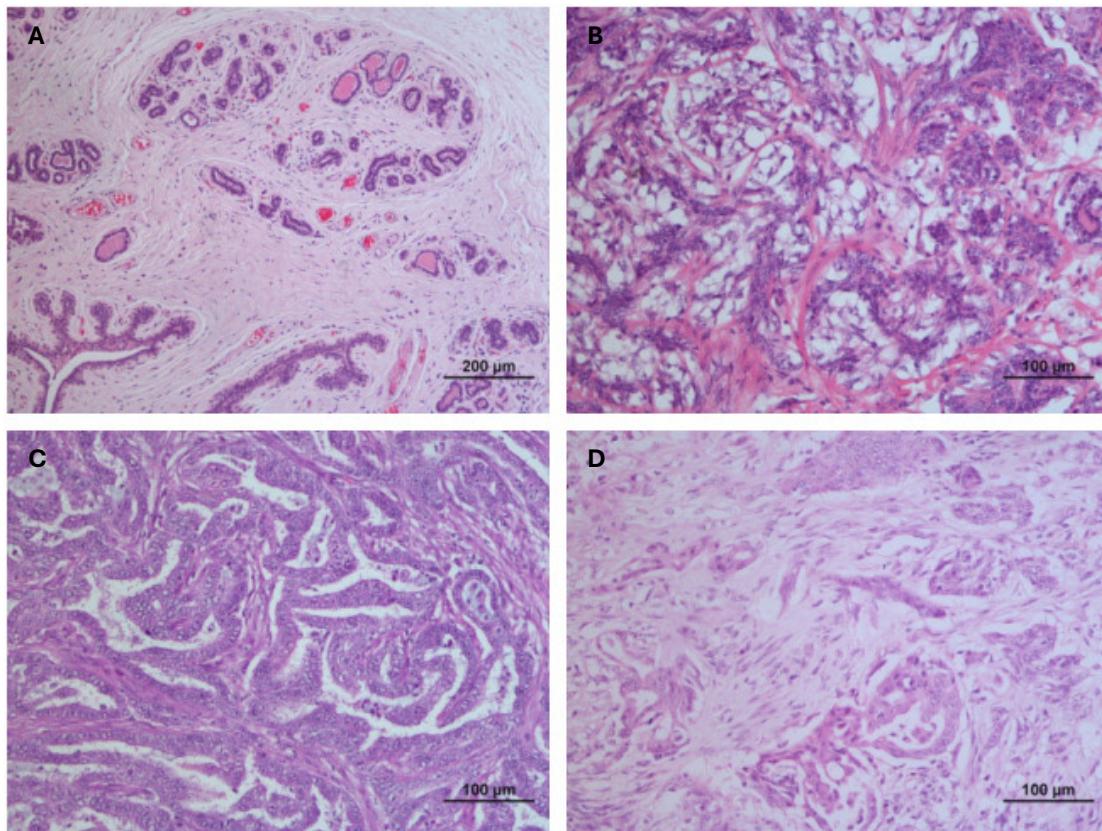

Figure S1. Histopathology microphotographs representative of the canine mammary gland tissues analyzed in the present study: controls (A. normal mammary gland); benign lesions (B. complex adenoma); malignant lesions (C. tubulopapillary carcinoma and D. complex carcinoma). Hematoxylin and eosin staining.

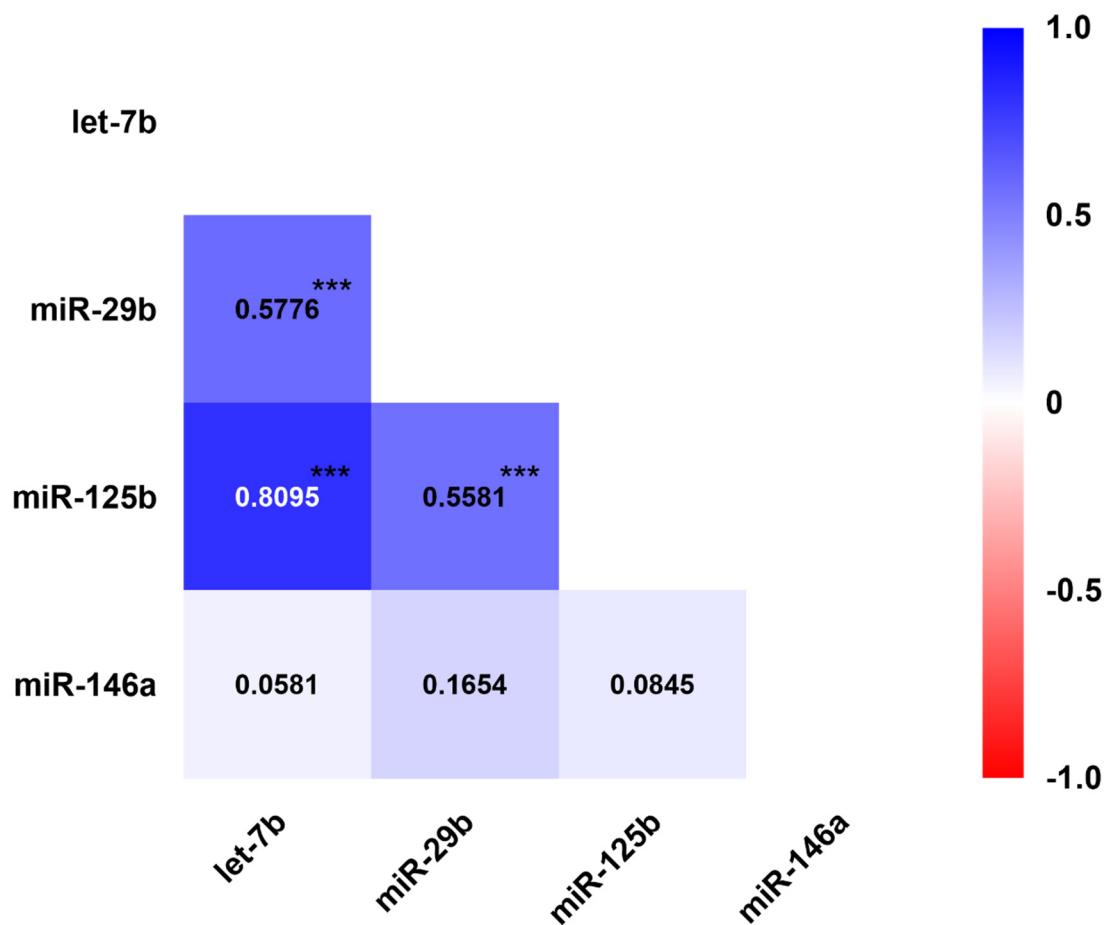

Figure S2. Heatmap of Pearson correlation coefficient matrix. The correlation matrix heatmap displays the Pearson correlation coefficients between microRNA expression data. In this matrix, 1 indicates a perfect positive correlation, 0 indicates no correlation and -1 indicates a perfect negative correlation between the studied microRNAs. Statistical significance: * $p<0.05$, ** $p<0.01$, *** $p<0.001$, **** $p<0.0001$.
