**Table S1** - Sleeping trees recorded during the study period belonged to 21 different species, 18 genera and 12 families.

Sleeping site	Family	Tree species	DBH (cm)	Latrine identified	Ten Further Monitored
Sleeping site 1	Anacardiaceae	<i>Tapirira guianensis</i>	20.7	x	
Sleeping site 2	Malvaceae	<i>Luehea seemannii</i>	44.3		
Sleeping site 3	Clusiaceae	<i>Sympmania globulifera</i>	24.5		
Sleeping site 4	Moraceae	<i>Ficus insipida</i>	115	x	x
Sleeping site 6	Humiriaceae	<i>Vantanea barbourii</i>	65		
Sleeping site 8	Fabaceae	<i>Tachigali versicolor</i>	109.8	x	x
Sleeping site 9	Sapotaceae	<i>Pouteria sp.</i>	75.1	x	
Sleeping site 10	Clusiaceae	<i>Sympmania globulifera</i>	58	x	
Sleeping site 11	Myristicaceae	<i>Otoba novogranatensis</i>	27.5		
Sleeping site 12	Humiriaceae	<i>Vantanea barbourii</i>	85	x	
Sleeping site 13	Fabaceae	<i>Dialium guianense</i>	55	x	x
Sleeping site 14	Moraceae	<i>Pseudolmedia spuria</i>	24.2	x	
Sleeping site 15	Myristicaceae	<i>Otoba novogranatensis</i>	36.5		
Sleeping site 16	Myristicaceae	<i>Otoba novogranatensis</i>	41	x	x
Sleeping site 17	Anacardiaceae	<i>Tapirira guianensis</i>	47	x	
Sleeping site 18	Myristicaceae	<i>Otoba novogranatensis</i>	36.6		
Sleeping site 19	Burseraceae	<i>Tetragastris panamensis</i>	45.7		
Sleeping site 20	Moraceae	<i>Ficus osensis</i>	59.4	x	
Sleeping site 21	Moraceae	<i>Brosimum utile</i>	78	x	
Sleeping site 22	Fabaceae	<i>Dussia macrophyllata</i>	80	x	
Sleeping site 23	Moraceae	<i>Brosimum utile</i>	89	x	
Sleeping site 24	Moraceae	<i>Brosimum utile</i>	89	x	
Sleeping site 25	Anacardiaceae	<i>Tapirira guianensis</i>	64.2		
Sleeping site 26	Fabaceae	<i>Tachigali versicolor</i>	72		
Sleeping site 27	Fabaceae	<i>Schizolobium parahyba</i>	160	x	
Sleeping site 28	Myristicaceae	<i>Virola spA</i>	40.1	x	x
Sleeping site 29	Clusiaceae	<i>Sympmania globulifera</i>	27.7	x	
Sleeping site 30	Myristicaceae	<i>Otoba novogranatensis</i>	66.4	x	x
Sleeping site 32	Moraceae	<i>Ficus insipida</i>	98	x	x
Sleeping site 33	Moraceae	<i>Ficus insipida</i>	35.2		
Sleeping site 34	Moraceae	<i>Ficus obtusifolia</i>	92	x	x
Sleeping site 35	Olacaceae	<i>Heisteria coccinea</i>	36.5	x	
Sleeping site 36	Humiriaceae	<i>Vantanea barbourii</i>	60	x	x
Sleeping site 37	Euphorbiaceae	<i>Hieronyma alchorneoides</i>	110	x	
Sleeping site 38	Moraceae	<i>Brosimum costaricanum</i>	40	x	
Sleeping site 40	Caryocaraceae	<i>Caryocar costaricense</i>	116	x	
Sleeping site 41	Anacardiaceae	<i>Tapirira guianensis</i>	78.9	x	
Sleeping site 42	Myristicaceae	<i>Otoba novogranatensis</i>	37.9	x	x
Sleeping site 43	Moraceae	<i>Ficus insipida</i>	62		

**Table S2** - Species list for each group (mammals, birds and reptiles) recorded by the terrestrial cameras in latrines, non-latrines and by the arboreal camera traps in the sleeping sites.

latrine			non-latrine			arboreal		
mammals	birds	reptiles	mammals	birds	reptiles	mammals	birds	reptiles
<i>Dasyprocta punctata</i>	<i>Formicarius analis</i>	<i>Iguana iguana</i>	<i>Dasyprocta punctata</i>	<i>Formicarius analis</i>	<i>none</i>	<i>Ateles geoffroyi</i>	<i>Pteroglossus frantzii</i>	<i>Iguana iguana</i>
<i>Dasypus novemcinctus</i>	<i>Crax rubra</i>		<i>Nasua narica</i>	<i>Crax rubra</i>		<i>Cebus imitator</i>	<i>Crax rubra</i>	
<i>Nasua narica</i>	<i>Leptotila cassini</i>		<i>Dasypus novemcinctus</i>	<i>Geotrygon montana</i>		<i>Saimiri oerstedii</i>	<i>Pulsatrix perspicillata</i>

**Table S3** – Summaries and effects sizes for the linear mixed effects models on latrines and non-latrine controls. Where: ‘Lower 95% CI’ = lower 95% confidence interval; ‘Upper 95% CI’ = upper 95% confidence interval, ‘Effect size’ is estimated percentage change in the response variable from the control site, to the latrine. Emboldened rows represent confidence intervals that don’t overlap zero.

Method	Response	$\beta$ -coefficient (latrine)	Lower 95% CI	Upper 95% CI	Effect size (%)
Camera trapping	Total visitation rate	16.61	-1.53	34.74	+97.0

Sp38	<i>Eurysternus plebejus</i>	0.006
Sp40	<i>Copris incertus</i>	0.057

**Table S6** - Abundance, species richness and biomass of dung beetles for each of the sampled latrine and non-latrine control sites during the study period. The biomass was calculated from biomass measurements recorded in a previous study in 2017. An average biomass was calculated based on measurements for 1-25 individuals for each species this was then used to calculate an overall biomass for each trapping location.

site_id	abundance			spp richness			dry biomass (g)		
	latrine	control	total	latrine	control	total	latrine	control	TOTAL

Total plants species identified in latrines			80
Species of plants consumed from direct observations			50
Total species of plants consumed			111

**Table S8** - Species list of food consumed by spider monkeys observed in latrines and by direct visual feeding observations (all observations made from August 2018 to April 2019). To investigate the seedling richness in the latrines, a 1m<sup>2</sup> quadrat was surveyed in the centre of each sub-selected latrine. In each quadrat, all the seedling species were counted and identified at the lowest taxonomic level possible, once a month for nine months (August 2018 to April 2019).
