

**Copper bioavailability and leaching in conventional and organic viticulture under environmental stress**  
Erika Jez, Elisa Pellegrini and Marco Contin

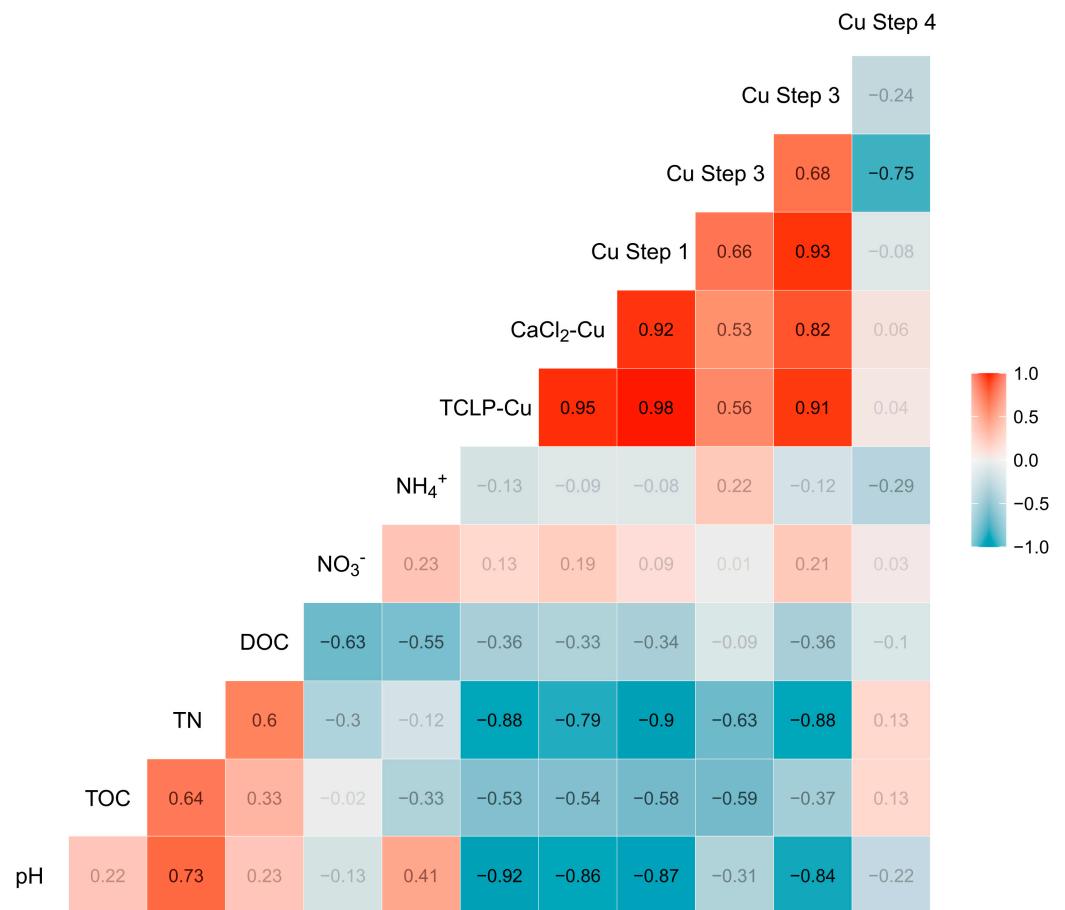

**Supplementary Material**

**Figure S1.** Experimental layout.

**Figure S2.** Cu speciation in acid and calcareous soils (expressed as percentage) with BCR four steps sequential extraction procedure before and after 6-months incubation under moisture, temperature and combined stresses.

**Figure S3.** Correlation table of soil properties. Red color cells show positive P values, blue color negative P values, and shaded cells show not significant correlations.

**Table S1.** Two-way ANOVA output testing the significant effects of soil type, soil management or their interaction on soil properties.
