

Supplementary Figure S1. Effects of aging on cognitive tests by Alzheimer's disease status

DSMSE = Down Syndrome Mental Status Examination, mMMSE = Modified Mini Mental Status Examination, RADD-2 = Rapid Assessment of Developmental Disabilities, 2nd Edition, SRT = Selective Reminding Test, VMI = Beery Developmental Test of Visual Motor Integration

Aging was associated with lower performance on 9 of the cognitive tests in our battery, controlling for disease status. Disease status did not accelerate age-related decline except for on the RADD-2 Sensorimotor scale.
