

Supplemental Figure S3. the antioxidant effect of CiPrx3 on prx3 subfamily genes during virus infection. (A-E) Relative mRNA expression level of Prxs subfamily genes. GCO cells were transfected with pcDNA3.1-Prx3 or pcDNA3.1 and then infected with GCRV and cells were collected at different time points. Data were shown as the mean \pm SD ($n = 3$). Asterisks (*) represent significant differences ($* = p \leq 0.05$, $** = p \leq 0.01$).
