

Figure S1. The linear regression between total titratable acidity and DPPH radical scavenging activity of kisra fermented with the selected *P. pentosaceus* strains. (a) Control group (kisra naturally fermented without an inoculum), (b) K-B21 group (kisra fermented with *P. pentosaceus* K-B21), (c) K-B01 group (kisra fermented with *P. pentosaceus* K-B01). Each dot indicates the mean value determined at each period of kisra processing.
