

**Figure S1.** Effects of gentamicin on OPC confluency. Real-time phase contrast measurements of cell confluency under three conditions: 0  $\mu$ M (vehicle, gray circles), 150  $\mu$ M (light orange circles), and 600  $\mu$ M gentamicin (orange circles). Data represent the mean of 3 independent experiments, each with 3 technical replicates per time point  $\pm$  SD.
