

Figure S1. Construction of recombinant plasmid containing the full HA and M1 protein genes. HA and M1 genes derived from the H6 AIV from A/chicken/Taiwan/3943/2012 were cloned into the pFastBac Dual vector.

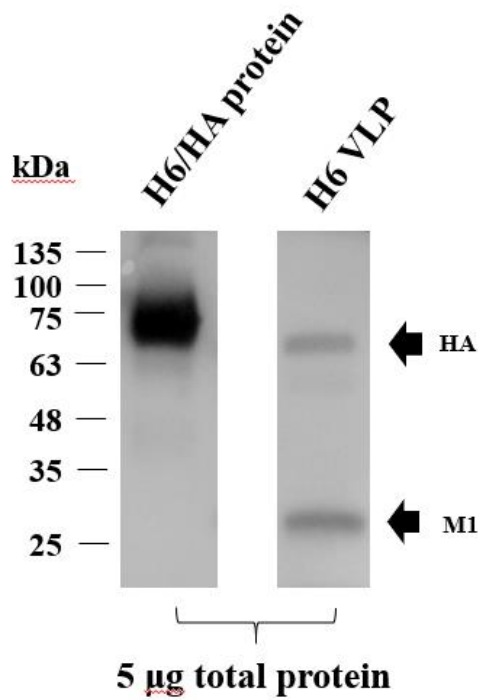

Figure S2. Quantification of HA antigen in H6 VLPs. Equal amount (5 ug) of H6/HA recombinant protein and H6 VLPs were analyzed by Western blot using chicken H6 AIV antiserum.
