

Figure 1. Correlation between antibody titers against recombinant IrSPI (A–C, G–I) and IrLip1 (D–F, J–L) in sheep vaccinated against IrSPI (A–C), IrLip1 (D–F), both IrSPI and IrLip1 (G–L), and effect on mortality, engagement and molting of *L. ricinus* larvae at Day 45 after sheep immunization. The linear correlation coefficients (R²) are shown (N = 6). Antibody titers are represented as arbitrary units.
