Supplementary Figure 2. Rabbit anti-PfCelTOS and purified IgG PfMSP1₁₉ responses. **(a)**

Rabbit sera ELISA titers for antigen-specific antibodies to the full length, N-term, and C-term of PfCelTOS. **(b)** Purified IgG from rabbits immunized with 50 µg of SAPN or recombinant protein measuring FVO and 3D7 PfMSP1₄₂-specific antibodies at 1.25, 2.5, and 5 mg/mL. **(c)**

PfCelTOS-oxPfMSP1₁₉ purified IgG dose titration measuring growth inhibition of the FVO and 3D7 parasite strains at 1.25 and 2.5 mg/mL. Data are shown as the mean with +/- standard error

of the mean and were analyzed for statistical difference using nonparametric multiple t tests, Holm-Sidak method.

Supplementary Figure 3. Reactivity of polyclonal anti-PfCel-PfCel and anti-rPfCelTOS antibodies against *P. falciparum* sporozoites. The antiserum used for the staining was collected two weeks following the third immunization and was tested at 1:200 dilution. Pooled pre-immunization serum and pooled anti-PfCelTOS serum from BALB/c mice immunized with recombinant PfCelTOS in Montanide were used for negative and positive controls, respectively. Images were taken at 1,000x magnification.
