

## Supplemental Content

**Supplemental Table S1.** Number of patients at risk per risk group of the FRS.

Years of Follow Up	Low Risk	Medium Risk	High Risk
0	147	151	300
2	141	145	271
4	137	135	239
6	130	127	199
8	119	113	167
10	93	84	113
12	0	0	0

**Supplemental Table S2.** Association of individual components of the FRS with chronic graft failure.

	Hazard Ratio	95% CI	<i>p</i> -Value
Age	0.97	0.95-0.99	0.006
Sex	0.98	0.62-1.55	0.92
Systolic blood pressure	1.02	1.00-1.02	0.002
Smoking	1.92	1.21-3.06	0.006
Use of anti-hypertensives	1.02	0.50-2.08	0.95
Diabetes	1.19	0.64-2.20	0.58
Concentration of HDL-C	0.97	0.94-0.99	0.003
Concentration of total cholesterol	1.00	1.00-1.01	0.41

Hazard ratios are computed by Cox proportional hazard regression. Abbreviations: HDL-C, high density lipoprotein cholesterol.
