This table evaluates other characteristics reported in studies. NP = neuropathic pain, PGIC = patient global impression of change, BPI = brief pain inventory, SAEs = serious adverse events, AEs = adverse events, ↯ = SGIC (subjective global impression of change), ** = measured only by quality, ## = measured by QoL - Quality of Life, * = reported to have zero drop-outs, QST = quantitative sensory testing, VDT = vibration detection threshold, ? = data unclear, n.s = not significant.
