Notes: TVD, three-vessel disease; cTnI, cardiac troponin I; MACE, major adverse cardiovascular events; ACS, acute coronary syndrome; URL, upper reference limit; HR, hazard ratio; CI, confidence interval; *p value for interaction test represents interaction of cTnI level ($\geq 70 \times$ URL vs. $< 70 \times$ URL) and participants groups (Non-TVD vs. TVD) on MACE. † Adjusted for age, sex, systolic blood pressure, left ventricular end-diastolic volume, hypertension, diabetes mellitus, hemoglobin, NT-proBNP. The cTnI<70×URL group is the reference group.

Table S2. The effect of TVD on the predictive value of cTnI for 5-year MACE in non-ACS patients.

	cTnI<70×URL (<2.8 ng/ml)		cTnI≥70×		Unadjusted	Adjusted*

TVD	122	17(13.9%)	6	1(16.7 %)	0.98 (0.13-7.36)	0.983	0.99 (0.11-9.04)	0.990

Notes: TVD, three-vessel disease; cTnI, cardiac troponin I; MACE, major adverse cardiovascular events; ACS, acute coronary syndrome; URL, upper reference limit; HR, hazard ratio; CI, confidence interval; *Adjusted for age, sex, systolic blood pressure, left ventricular end-diastolic volume, hypertension, diabetes mellitus, hemoglobin, NT-proBNP. The cTnI<70×URL group is the reference group. † The number of events in non-TVD group with cTnI $\geq 70 \times$ URL is 0 and cannot be analyzed.
