

Supplementary Table S1. Relationship between TTE wait time as a continuous variable and 28-day mortality in two-piece-wise Cox regression model.

Wait time (as a continuous variable)	HR (95% CI)	P value
≤10 hours	1.05 (1.01, 1.10)	0.013
> 10 hours	0.99 (0.98, 1.01)	0.349
Log likelihood ratio test		0.015
