

Table S1. Main characteristics of the studies included in the qualitative synthesis.

Author	Published	Species	Comparison (X vsY)	No. of animals	Jaw	No. of extracted teeth	Healing period (m=months, w=weeks)	Study design (split mouth, inter quadrant)	Shape (cylindrical/ screw-type)	Size (withd/ Length) (mm)	Type of implant		Bone level/ Tissue level	Nr of implants/ animal	1 stage/ 2 stage surgery	Surgical protocol		Randomisation	Loading	Antibiotic	Pre- and postoperative care		
											Material	Coating				Implant center to center distance (mm)	Time implant healing + abutment-PI induction				Plaque control timing (before/ after induction)	Plaque control duration (months)	Plaque control method
1. Klinge	1991	Dog, Beagle	Implants vs teeth – Pilot studys	2	Mandible	All PMs on the right side	75d	Split mouth – implants vs teeth	Screw-type (Nobelpharma Company)	NA	Ti	NA (U?)	Bone level	7: 3 in one dog and 4 in the other	2-stage	NA	6m+4w	No	NA-no suprastruct ure	Na – perioperative drugs no specified	NA	NA	NA
2. Hickey et al	1991	Microsw ine	Microbiologic changes	2	Mandible	All mandibula r PMs	>4m	Split mouth	Screw shaped	NA Bånemark	Ti	U	Bone level	6: 3 in each side of the mandible	2-stage	NA	2m+2w	Yes – Ligatures on randomised side in the first swine. Other side used in the second swine	NA (no suprastruct ure)	NA	(A) Only control side. 2w after abutment placement (day 0)	(A) 45d	(A) Scaled and cleaned free of plaque and calculus every 5d (1) Brush, interdental brush, electric pencil brush, CHX 0,2%. Interval NA. (2) CHX twice a week (3) same as (1)
3. Akagaw a et al.	1992	Monkey, Macaca fuscata	Ligature vs no ligature on implants and teeth	9	Maxilla and mandible	6 (Maxillary lateral incisor, mandibula r second premolar and first molar on both sides.)	3m	Split mouth with ligatures on one side and plaque control on the other. Also inter- quadrant comparison between teeth and implants.	Screw-type with integrated abutment for cementum retained restoration	NA	Sapphire	NA	Tissue level	4 (1 in each quadrant)	1 stage	NA	3m + 0	No	NA Implants were connected to both neighborin g teeth with a fixed suprastruct ure 1 month after implant insertion	0,5 g/day cefalologine intramuscula rly for three days postoperative ly	(1) 2 months after extraction (2) After implant installation (3) 2 weeks after implant installation	(1) 1m (2) 2w (3) 3m minus 2w	
4. Ericsson et al	1992	Dog, Beagle	Effects of plaque accumulation around implants vs teeth	5	Mandible, right side	Right premolars	3m	Split mouth	Screw shaped (Brånemark)	NA	Ti	NA	Bone level	3 on the right side	2-stage	NA	3m+4m	No	Na (No suprastruct ure used)	NA	After abutment connection	4m	Brush and dentifrice daily
5. Leonhar dt et al	1992	Dog, Beagle	Bacteria around implants vs teeth	4	Mandible	PM1 PM2 PM3 PM4 On the right side	3m	Split mouth, implants on left side, teeth on the right	Screw shaped Brånemark	NA	Ti	Turned	Bone level	2 implants and 2 teeth. Third implant used in Lindhe 1992	2-stage	NA	3m+2m (at which plaque accumulatio n was initiated. Ligatures placed 49d later)	No	NA (No suprastruct ure)	NA	(A) After abutment connection	(A) 2m	(A) Brush and dentifrice daily
6. Lindhe et al	1992	Dog, Beagle		5	Mandible	PM1 PM2 PM3 PM4	3m	Split mouth, implants on left side, teeth on the right	Screw shaped Brånemark	NA	Ti	Turned	Bone level	3 on the right side of the mandible	2-stage	NA	3m+6m	No	NA (No suprastruct ure)	NA	(A) After abutment connection	(A) 6m	(A) Brush and dentifrice daily

7. Akagawa et al	1993	Monkey, Macaca fuscata	Ligature vs no ligature on implants and teeth	9	Maxilla and mandible	On the right side  6 (Maxillary lateral incisor, mandibular second premolar and first molar on both sides.)	3m	Split mouth with ligatures on one side and plaque control on the other. Also inter-quadrant comparison between teeth and implants inter-quadrant.	Screw-type with integrated abutment for cementum retained restoration	NA	Sapphire	NA	Tissue level	4 (1 in each quadrant)	1 stage	NA	3m + 0	No	NA Implants were connected to both neighboring teeth with a fixed suprastructure 1 month after implant insertion	0,5 g/day cefalologine intramuscularly for three days postoperatively	(1) 2 months after extraction (2) After implant installation (3) 2 weeks after implant installation	(1) 1m (2) 2w (3) 3m minus 2w	(1) Brush, interdental brush, electric pencil brush, CHX 0,2%. Interval NA. (2) CHX twice a week (3) same as (1)
8. Grunder et al	1993	Dog, Beagle	TREATMENT	10	Mandible, both sides	4: 2 in each side of the mandible (PM3, PM4)	6m	Split-mouth	Screw-shape (Screw-vent, Dentsply)	3,25x7	Ti	NA	Bone level	4: 2 on each side	2-stage	NA	2m+2m	Yes treatment: toss of a coin	NA (Ti-abutments, loading not mentioned)	NA	(A) after implantation & after abutment & after peri-implant surgery (B) 1w after abutment connection (D) 1w after peri-implant surgery	(A) 1w (B) 2m (C) 3m	(A) CHX daily (B) Brush, water, pumise daily (C) same as (B)
9. Jovanovic et al	1993	Dog, Beagle	TREATMENT STUDY new bone formation on 3 different surfaces	3	Mandible	M1, all PMs	12w	5 implants with mixed surfaces on each side of the mandible	Screw shaped	(A) Brånemark 4x10 mm (B) IMZ 4x8 mm (C) Integral4x8 mm	Ti	(A) U (B) TPS (C) HA-implant	Bone level	10: 5 in each side of the mandible	1-stage	NA	0+0m (ligature placed at same time as implants)	No	No	NA	NA	NA	NA
10. Lang et al	1993	Monkey, cynomolgus	Plaque accumulation vs ligature	4	Mandible	6: PM2 M1 M2 On both sides	90d	Interquadrant: One implant with ligature and one without in each quadrant	Cylindrical ITI type F	6,0x3,0 mm)	Ti	TPS	Tissue level	4: 2 on each side of the mandible	1-stage	NA	60d+0d	NA	No	NA	(A) After implant placement (B) From day 60-	(A) 60d (B) 30d	(A) Rubber cup and pumice 3 times/ w. (B) Suspended plaque control
11. Schou et al	1993	Monkey, Macaca Fascicularis	Marginal inflammation around implants vs ankylosed teeth – histologic study of ICT	8	Mandible	M1, M2 on both sides	12w	Split mouth, ligatures on one side (ligature vs no ligature). Upper jaw vs lower jaw	Cylindrical, custom made. Collar on ligature implants for ligature retention	2,5 x 10 mm	Ti-coated polycarbonate	Ti coated polycarbonate	Tissuelevel	4: 2 on each side	1 stage	-	12w + 0	YES	No	Streptomycin - benzylpenicillin (Streptocillin Vet., 200.000 IE/ml, 1 ml),	(1) 2w before and 2w after extractions (2) 2w before and 8w after implant surgery	(1) 4w (2) 10w	(1) Brush, 2% CHX solution 3 min, 3t/w. (2) same as 1

12. Schou et al	1993	Monkey, Macaca Fascicularis	Marginal inflammation round implants vs ankylosed teeth	8	Mandible	M1, M2 on both sides	12w	(implant, vs tooth)  Split mouth, liagtures on one side (ligature vs no ligature). Upper jaw vs lower jaw (implant, vs tooth)	Cylindrical, custom made. Collar on ligature implants for ligature retention	2,5 x 10 mm	Ti-coated polycarbonate	Ti coated polycarbonate	Tissuelevel	4: 2 on each side	1 stage	-	12w + 0	YES	No	2h preop. And once a day for 10 d. post op Streptomycin - benzylpenicilin (Streptocillin Vet., 200.000 IE/ml, 1 ml), 2h preop. And once a day for 10 d. post op	(1) 2w before and 2w after extractions (2) 2w before and 8w after implant surgery	(1) 4w (2) 10w	(1) Brush, 2% CHX solution 3 min, 3t/w. (2) same as 1
13. Singh et al	1993	Micro Pig	TREATMENT STUDY	1 (originally 2, but 1 lost)	Mandible	NA	NA	Inter-quadrant	Root-form implant (Nobelpharma, USA, Chicago, IL).	NA	Ti	NA	NA	6: 3 on each side	NA	NA	NA	NA	NA	NA	NA	NA	
14. Lang et al	1994	Dog, Beagle		5	Mandible	6: PM2 PM3 PM4 On both sides	4m		Cylindrical ITI	2,8x6 mm	Ti	TPS	Tissue level	6: 3 on each side of the mandible	1-stage	4 mm adjacent to neighbouring teeth and 4 mm between the implants	0+2m	No	No	Penicillin for 5d after implant insertion	(A) After tooth extractions (B) 1w after implant insertion	(A) 4m (B) 2m	(A) Rubber cup and pumice once a week. Soft brush 3 times/ w. (B) same as (A) + CHX 0,12%.
15. Schüpbach et al	1994	Dog, Beagle	TREATMENT – Implant-tissue interfaces following PI-treatment with GBR	10	Mandible, both sides	4: 2 in each side of the mandible (PM3, PM4)	6m	Split-mouth	Screw-shape (Screw-vent, Dentsply)	3,25x7	Ti	NA	Bone level	4: 2 on each side	2-stage	NA	2m+2m	Yes treatment: toss of a coin	NA (Ti-abutments, loading not mentioned)	NA	(A) after implantation & after abutment & after peri-implant surgery (B) 1w after abutment connection (D) 1w after peri-implant surgery	(A) 1w (B) 2m (C) 3m	(A) CHX daily (B) Brush, water, pumise daily (C) same as (B)
16. Weber et al	1994	Dog, beagle	NSAID: Inhibition of peri-implant bone loss	2	Mandible	All PMs and M1 on both sides	3m	Comparison between animals	Cylindrical, tissue level (Straumann AG, Walderinburg, Switzerland)	2,05 x 8 mm	(1) Ti	TPS	Tissue level	10: 5 on each side	1-stage	NA	3m+o	No	No loading	Bicillin 600,000 units IM prior to implant insertion	(a) after surgery (b) 14 days after implant insertion	(a) 2w (b) 2,5m	(a) 0,12% CHX rinse daily (b) Brush + 2% CHX gel daily
17. Cook et al	1995	Dog, Mongrel	2 implant surfaces	14	Mandible, implants on both sides	4 premolars on each	2m	Interquadra nt	Cylindrical (Calicitec implants)	4x10	Ti	A: Cancellous-structured titanium B: HA-coated	Bone level	6 (3 on each side. 2 implants were not	2-stage	NA	8w+0	NA	NA (although no suprastruct	5 days postoperatively	None at the test side. At the time of abutment	From abutment surgery to end of study	Weekly brushing

						side of the mandible								inserted due to anatomical reasons)					ure was used)		connection on the control side.		
18. Ericsson	1995	Dog, Labrador	Plaque control vs no plaque control	5	Mandible, both sides	8: 4 each side (1 <sup>st</sup> M, 4 <sup>th</sup> PM, 3 <sup>rd</sup> PM, 2 <sup>nd</sup> PM)	3m	Interquadra nt	Screw shaped (Brånemark)	3,75x10	Ti	NA	Bone level	6: 3 on each side	2-stage	NA	3m+3m	No	Na (No suprastruct ure)	NA	After abutment connection	3m	Brush and dentifrice daily
19. Hürzeler et al	1995	Dog, Beagle	TREATMEN T STUDY 6 different treatments	4	Mandible	All mandibula r PMs and M1	3m	Ligatures around all implants	Screw Shaped	3,75x7 mm Brånemar k	Ti	U	Bone level	6: 3 on each side of the mandible	2-stage	NA	3m+2w	Yes, according to treatment	No.	Yes, after ligature removal. systemic Metronidazol e hydrochlorid e 250mg daily for 3w	(A) After ligature removal (B) After Peri- implantitis surgery	(A) 2w (B) 3w	(A) Daily brushing with flour of pumice mixed with 0,12% CHX + 0,12% CHX spray. (B) 0,12% CHX spray
20. Marinell o et al	1995	Dog, Labrador	Bone loss at different time intervals from ligature removal	5	Mandible	PM3 PM4 M1 On both sides of the mandible	3m	Comparison between dogs at different time points from ligature removal	Screw shaped, Brånemark	3,75x10 mm	Ti	NA	Bone level	4: 2 on each side of the mandible	2-stage	NA	3m+6m	No	No	NA	(A) after abutment surgery	(A) 6m	(A) tooth and implant cleaning 1t/d
21. Warrer et al	1995	Monkey, Macaca Fascicul aris	Bone level and clinical features with ligature or passive plaque accumulation in presence or absence of keratinized mucosa TREATMEN T STUDY	5	Mandible	PM2, M1, M2 on both sides	3m	Split mouth	Cylindrical (ITI, Hollow cylinder)	3x 8 mm	Ti	TPS	Tissue level	6: 3 on each side 22 implants included in study, remaining implants reported elsewhere	1-stage	Equal distance between implants and adjacent teeth	3m and 10d + 0	Yes, 8 implants placed in keratinized mucosa and 8 placed in non-keratinized mucosta randomly chosen	No – all placed in infraocclus ion	Penicillin, Procaine Vet. Rosco, 0,13 ml/kg the first day post op	(A) 10d after implant surgery	(A) 3m	(A) CHX 0,2% applied with soft bristle brush 1t/ w.
22. Ericsson et al	1996	Dog, Labrador	Bone level and clinical features with ligature or passive plaque accumulation in presence or absence of keratinized mucosa TREATMEN T STUDY systemic antibiotics with/without local debridement	5	Mandible, both sides	6: 3 each side (1 <sup>st</sup> M, 4 <sup>th</sup> PM, 3 <sup>rd</sup> PM)	3m	Split mouth	Screw shaped (Brånemark)	3,75x10	Ti	NA	Bone level	6: 3 on each side	2-stage	NA	3m+3m	No	NA (No suprastruct ure)	NA	Immediately following abutment connection	3m	Tooth and implant cleaning 3times/w
23. Isidor	1996	Monkey, Macaca Fascicul aris	Overload vs ligature	4	Mandible	M1, all PMs, all Is	8m	Split mouth	Screw shaped	3,5x8 mm	Ti	2x TiO2 on one side and symfysis, 2x machined on the other	Bone level	5: 2 in each side and 1 in the symphysis	2-stage	NA	6m+0	No	Yes on the overload side	NA	(A) On overload side after fixing the prosthesis	(A) 18m	(A) Brush once/ week. Gentel mechanica l cleaning

24. Persson et al.	1996	Dog, Labrador	TREATMEN T STUDY	5	Mandible	PM3, PM4, M1 on both sides of the mandible	3m	Split mouth	Screw type, Brånemark, Nobel Biocare, Göteborg, Sweden	3,75x10 mm	Ti	U	Bonelevel	6: 3 on each side	2 stage	-	3m+3m	No	-	1 month after ligature removal: Amoxicillin 375mg x2 for 3w Streptomycin - benzylpenicil lin (Streptocillin Vet., 200.000 IE/ml, 1 ml), 2h preop. And once a day for 10 d. post op	(1) After abutment surgery	(1) 3m	of pockets 1/ month (1) tooth and abutment cleaning 3t /w.
25. Schou et al	1996	Monkey, Macaca Fascicul aris	Marginal inflammation round implants vs ankylosed teeth – Microbiologic study	8	Mandible	M1, M2 on both sides	12w	Split mouth, ligatures on one side (ligature vs no ligature). Upper jaw vs lower jaw (implant, vs tooth)	Cylindrical, custom made. Collar on ligature implants for ligature retention	2,5 x 10 mm	Ti-coated polycarbo nate	Ti coated polycarbonate	Tissuelevel	4: 2 on each side	1 stage	-	12w + 0	YES	No		(1) 2w before and 2w after extractions (2) 2w before and 8w after implant surgery	(1) 4w (2) 10w	(1) Brush, 2% CHX solution 3 min, 3t/ w. (2) same as 1
26. Fritz et al	1997	Monkey (Macaca mulatta)	Plate-form vs root-form implants vs natural teeth	36	Mandible, both sides	All mandibula r molars	6m	Comparison between animals	Plate-form Screw-shaped (Osseodent. Collagen Corporation, Palo Alto CA. According to Fritz 1994)	Screw- shaped: 3,75x7 Plate form: 14x7x1,6	Ti	Na	Bone level	12 natural teeth (2 <sup>nd</sup> molar), 11 plate-form (2 <sup>nd</sup> molar region, 12 root form implants (2 <sup>nd</sup> molar egion)	2-stage	-	6m+12m	Yes.	Yes, Fixed bridge placed min 3 m after implantatio n	Penicillin G procaine, 300,000 post operatively	At the time of suprastructure connection, min 6 months after implant installation	12m	Monthly cleaning, polishing of implants and teeth and implant scaling with plastic scaler (A) Brusch + 2% CHX daily (B) Brusch+ 2% CHX 3times/w (A) Daily brushing with flour of pumice mixed with 0,12% CHX + 0,12% CHX spray. (B) 0,12% CHX spray
27. Hanisch et al	1997	Monkey, Macaca Mulatta	Experimental peri- implantitis	4	Maxilla and mandible	All premolars	3m	Maxilla vs mandible	Cylindrical	NAx10 Bio-vent Dentsply	Ti	HA-coated	Bone level	8: 2 in each quadrant	2-stage	NA	12m+5m	No	NA (no suprastruct ure)	NA	(A) 2m after abutment connection (B) 11m after baseline (1m afterligature removal)	(A) 3m (B) 4w	
28. Hürzeler et al	1997	Dog, Beagle	TREATMEN T STUDY 6 different treatments	7	Mandible	All mandibula r PMs and M1	3m	Ligatures around all implants	Screw shaped	3,75x7 mm Brånemar k	Ti	U	Bone Level	6: 3 on each side of the mandible	2-stage	NA	3m+2w	Yes, according to treatment	No	Yes, after ligature removal. systemic Metronidazol e hydrochlorid e 250mg daily for 3w	(A) After ligature removal (B) After Peri- implantitis surgery	(A) 2w (B) 3w	

29. Isidor	1997	Monkey, Macaca Fascicularis	Overload vs Ligature	4	Mandible	M1, all PMs, all Is	8m	Split mouth	Screw shaped	3,5x8 mm	Ti	2x TiO2 on one side and symfysis, 2x machined on the other	Bone level	5: 2 in each side and 1 in the symphysis	2-stage	NA	6m+0	No	Yes on the overload side	NA	(A) On overload side after fixing the prosthesis	(A) 18m	(A) Brush once/ week. Gentel mechanica l cleaning of pockets 1/ month (A) Brush once/ week. Gentel mechanica l cleaning of pockets 1/ month
30. Isidor	1997	Monkey, Macaca Fascicularis	Overload vs Ligature	4	Mandible	M1, all PMs, all Is	8m	Split mouth	Screw shaped	3,5x8 mm	Ti	2x TiO2 on one side and symfysis, 2x machined on the other	Bone level	5: 2 in each side and 1 in the symphysis	2-stage	NA	6m+0	No	Yes on the overload side	NA	(A) On overload side after fixing the prosthesis	(A) 18m	(A) Brush once/ week. Gentel mechanica l cleaning of pockets 1/ month
31. Saito et al.	1997	Dog, Mongrel	Effects of long-term undisturbed plaque formation on peri-implant tissues. 2 implant systems vs teeth	4	Mandible	PM3, PM4 on both sides	3m	Split mouth	Screw type, (BR) Brånemark and Cylinder type, (IN) Integral	NA	Ti	NA	Bone level	4: 2 on each side	2 stage	-	2m+1m	No	Yes, functional loading by means of a bridge	Single dose of Mycillin at implant placement and abutment connection respectively	(1) after abutment connection	(1) 1m	(1) brush and 0,12 CHX 1t /w.
32. Tillman ns et al	1997	Dog, Beagle	Bone loss around 3 different implant systems with and without ligatures	16	Mandible	PM2, PM3, PM4 On both sides	3m	Inter- quarant – 1 of each implant type on each side	(a) cylindrical (b) cylindrical (c) screw-form	(a)-(c) 4x 10 mm	(a)-(c) Ti- 6A1-4V	(a) Calcitite HA coating (Sulzer Calcitek, Carlsbad, CA) (b) Commercially pure TPS coating (APS Materials, Dayton OH) (c) Machined Ti- alloy surface (Sulzer, Calcitek)	Bone level	6: 3 on each side	2-stage	NA	3m+4w	Yes, one implant of each type randomly placed on each side of the mandible  Ligature side also randomly selected	No – suprastruct ure on neighbouri ng teeth used to prevent implant loading	NA	(A) 1m on ligature side. 4m on control side (until sacrifice)	(A) Brushing, interprox mal brushing and scaling with graphite scaler 3t/w. With sedation every 2w when necessary	
33. Abraha msson et al.	1998	Dog, Beagle	3 implant systems: 1. Astra tech Implants, Dental System. 2. Nobel biocare, Brånemark System. 3. ITI dental implants system	5	Mandible	All mandibula r premolars. (1 <sup>st</sup> 2 <sup>nd</sup> and 3 <sup>rd</sup> maxillary molars also extracted to avoid occlusal	3m	One of each fixture in each quadrant in a randomized order	Screw-type	1: 3,5x8 2: 3,75x7 3: 4x8	Ti	1: NA (TiOblast?) 2: NA (TiUnite?) 3: TPS	1 and 2: Bonelvel 3: Tissuelevel	6	1-2: 2-stage (submerged) 3: 1-stage (tissuelevel)	NA	3m + 1m	Yes	No	NA	After implant installation	4m	Daily brushing and dentifrice

[illegible]

39. Machado et al	1999	Dog, Mongrel	TREATMENT STUDY	4	Mandible	PM2, PM3, PM4 On both sides the mandible	3	Ligatures around all implants, then 4 different treatments	Screw shaped	8,5x3,75 mm	Ti	?	Bone level	4: 2 on each side of the mandible	2-stage	NA	3m+2w	(Yes but according to TREATMENT)	No	No (Metronidazole 250mg/day for 3w after ligature removal)	(A) After ligature removal before treatment (B) After PI treatment	(A) 2w (B) 5m	when necessary (A) Brush and CHX 0,12% daily (B) CHX daily Tooth and abutment cleaning every 2 <sup>nd</sup> day (a) tooth polish with rubber cup and pumice + 0,12% CHX 3t/w. CHX rinse (0,12%) for 2 weeks after implant insertion. Daily brushing with 0,2% CHX gel thereafter.
40. Persson et al.	1999	Dog, Beagle	TREATMENT STUDY	4	Mandible	PM1, PM2, PM3, PM4 on each side	4m	Different positions (inter-quadrant)	Screw type, Brånemark, Nobel Biocare, Göteborg, Sweden	7 mm leangth	Ti	U	Bonelevel	6: 3 on each side	2 stage	-	4m+2m	No	-	No removal,(Imacillin 250 mg x2) for 3w	(1) After abutment surgery	(1) 2m	(a) tooth polish with rubber cup and pumice + 0,12% CHX 3t/w. CHX rinse (0,12%) for 2 weeks after implant insertion. Daily brushing with 0,2% CHX gel thereafter.
41. Wetzel et al	1999	Dog, Beagle	TREATMENT STUDY Guided tissue regeneration with 4 different surfaces	7	Mandible	PM2, PM3, PM4	5m	Interquadrant distribution of 4 different surfaces	Hollow cylinder (ITI,	2,8 x6 mm	Ti	(1) TPS (2) SLA (3) U (4) TPS with perforation to mimic a furcation	Tissue level	41 implants in total	1-stage	NA	3m+0	No	NA – no suprastructure	During treatment	(a) after tooth extraction until induction of PI	(a) 8m	CHX rinse (0,12%) for 2 weeks after implant insertion. Daily brushing with 0,2% CHX gel thereafter.
42. Comut et al	2000	Dog, Beagle	3 implant surfaces A-C	4	Mandible, implants on both sides.	4 premolars and 1 molar on each side of mandible	3m	Inter-quadrant	Screw shaped ITI	8x3 mm (top 2 mm was a transmucosal part)	Ti	Identical surfaces except the apical 1 mm of the transmucosal part: A: Machined B: HA-plasma sprayed C: HA-ion beam assisted deposition	Tissue level	9-10 (39 total in all 4 animals, 4-5 per quadrant)	1-stage	NA	3+0	Yes	NA (although no suprastructure was used)	NA	2w after implant installation	3m minus 2w	Daily brushing with 0,2% CHX gel thereafter.
43. Machado et al	2000	Dog, Mongrel	TREATMENT STUDY	5	Mandible	PM2, PM3, PM4 On both sides the mandible	3	Ligatures around all implants, then 4 different treatments	Screw shaped	8,5x3,75 mm	Ti	?	Bone level	4: 2 on each side of the mandible	2-stage	NA	3m+2w	(Yes but according to TREATMENT)	No	No (Metronidazole 250mg/day for 3w after ligature removal)	(A) After ligature removal before treatment (B) After PI treatment	(A) 2w (B) 5m	(A) Brush and CHX 0,12% daily (B) CHX daily
44. Miyata et al	2000	Monkey, Macaca fascicularis	Overload supraocclusion 100 µm 180 µm 250 µm	4	Mandible, right side	PM2, M1 on the right side of the mandible	3m	Comparison between animals	Cylindrical (IMZ, Friatec, Mannheim, Germany)	2,8x8 mm	Ti	NA	Bone level	2 on the right side of the mandible	2-stage	NA	3m + 2w	No.	Yes – overload	NS	Hygiene start up point not specified	During the whole test phase	Cleaning 1/w under general anesthesia
45. Nocitiet al.	2000	Dog, Mongrel	TREATMENT STUDY GBR, bone substitute or both	5	Mandible	PM2, PM3, PM4 one both sides	3m	Each defect randomly allocated to one of 4 treatments	Screw-type (Napio System, Napio, Bauru, Brazil)	3.75x8.5	Ti	AE	Bonelevel	4: 2 on each side	2 stage	NA	3m+2w	Yes – according to treatment	No	After ligature removal: Metronidazole 250mg/ d for 3w	(1) after ligature removal (2) After peri-implantitis surgery	(1)2w (2) 5m	(1)Brush + 0,12% CHX daily (2) 0,12 CHX

46. Shibuta ni et al	2000	Dog, Beagle	Ligature induced bone loss with- without IV Pamidronate	10	Mandible	PM2, PM3 on the left side	6m	Comparison between animals	Screw shape (TiOblast, Astra Tech AB, Mölndal, Sweden)	3,5x 11 mm	Ti	TiOblast	Bone-level	2 per animal	2-stage	NA	4,5m+3w	NA	No	NA	(A) After abutment connection	(A) 3w	spray topically 2t/d. Yu et al	2017	Mouse	Experimental periodontitis and peri-implantitis in toll-like receptor 2 vs wild type mice	62	Maxilla	Left maxillary molars	6w	Split mouth – implant on the left side and tooth on the right side	Screw-type (DP Machining Inc, La Verne, Calif)	0,5x1 mm	Ti	Turned	Tissue level	1: 1 on the left side	1-stage	-	4w+0	No	No	Yes – for 2w after tooth extractions and 4w after implant insertion	NA	NA	NA
131. Hiyari et al	2018	Mouse	Ligature induced PI in different mouse strains	65	Maxilla	Left maxillary molars	8w	Comparison of 3 mouse strains (1) C57BL/6J (n=22) (2) C3H/HeJ (n=22) (3) A/J (n=21) Comparison between animals + split mouth with implant on one side and tooth on the other	Screw-type (DP Machining Inc, La Verne, Calif)	0,5x1	Ti	Turned	Tissue level	1: 1 on the left side	1-stage	-	4w+0	Yes, to ligature or control (no ligature)	No	For 4w aft tooth extractions/ implant surgery respectively. Diluted in drinking water	NA	NA	NA
132. Hiyari et al	2018	Mouse	Progression of ligature induced periodontitis vs peri-implantitis	85	Maxilla	Left maxillary molars (M1, M2, M3)	8w	Comparison between animals + split mouth with implant on one side and tooth on the other	Screw-type (DP Machining Inc, La Verne, Calif)	0,5x1	Ti	Turned	Tissue level	1: 1 on the left side	1-stage	-	4w+0	Yes, to ligature or control (no ligature)	No	For 4w aft tooth extractions/ implant surgery respectively. Diluted in drinking water	NA	NA	NA
133. Huang et al	2018	Dog, Beagle	Bone defect configuration depending on implant placement depth and implant type	6	Mandible	PM2, PM3, PM4, M1 on both sides of the mandible	8w	Interquadra nt: 2 of each implant type. 1 of each implant type placed 1,5 mm sub-crestally and the other 2 at bone level	Screw-type (OsseoSpeed, (A) Astra, Mölndal, Sweden and (B) Integra-CP. Bicon, Boston, USA I	(A)&(B) 3,5x8	Ti	(A) Fluoride modified TiOblast (B) Plasma-sprayed calcium-phosphate	Bone level and 1,5 mm sub-crestal level	4 on the left side, total of 24 implant in the study	2-stage	NA	12w+4w	Yes	No	For 7d after extractions. (1) After tooth extraction (2) After implant insertion (3) 10d after abutment surgery	(1) 1w (2) 1w (3) 4w minus 10d	(1) & (2) Cleaning with 0,12% CHX solution (3) 0,12% CHX irrigation every 2 <sup>nd</sup> day initially, then brush every 2 <sup>nd</sup> day	

Ti = titanium; TPS = titanium plasma sprayed; HA = hydroxyapatite, U = uncoated, turned/machined, AE – acid-etched, Before PI = prior to induction of experimental peri implantitis; After PI = following induction of experimental peri-implantitis; NA = Not available; CHX = Chlorhexidine

**Table S2.** Induction and outcome of experimentally induced peri-implant bone loss in studies included in the qualitative synthesis.

Induction of peri-implant bone loss																					
Diagnostic markers											Peri-implant bone defect										
Author	Published	Method (ligature/ overload/other)	Ligature material	Ligature size	Ligature exchange	Duration	Control side protocol	Clinical measurements (BoP/ PPD etc)	Mobility	Microbiological sampling (cultivation/ PCR)	X-ray	Histometric measurements	Histologic evaluation	Other	Registration (days from baseline/ ligature placement)	Vertical Bone loss Mean ± SD (mm)	Horizontal Bone loss Mean ± SD (mm)	Measuring method	Development after ligature removal (progression/ healing)	Bone loss ± SD (mm) at control side	Lost implants
1. Klinge	1990	Ligature	Silk	NA	NA	5m	Ligatures around corresponding PMs on the contralateral side	-	-	-	Periapical radiographs monthly	Marginal bone breakdown measured	Ground sections	-	150	Implants: 1 mm on average Teeth 5 mm on average	NA	Periapical radiographs	-	-	No losses reported
2. Hickey et al	1991	Ligature (submarginal, wrapped around abutment 15 times)	Silk	4-0	No	45d	Scaling and cleaning every 5d.	CAL, PPD, GI, PI,	-	Subgingival samples/ cultivation from all implants. At day 0, 14 and 45.	Periapical x-rays	-	-	-	45	NA, only CAL was measured	-	-	-	Control side: 0,08 mm	-
3. Akagawa et al	1992	Ligature (1 mm above gingival margin)	Silk floss	NA	No	12m (monthly clinical examinations)	Brush, interdental brush, electric pencil brush. Interval NA	Pi, Gingival index according to Löe & Silness -63, PPD at 25g pressure	-	-	-	-	-	-	365	-	-	-	-	-	None reported
4. Ericsson et al	1992	Spontaneous plaqueaccumulation	-	-	-	90d	-	Gross examination of plaque and inflammation	“non mobile” at end of experiment. Method NA	-	-	Decalcified blocks sectioned for light microscopy. Size and composition of ICT etc.	Composition of plaque associated ICT and abutment ICT tissues and cells. Some differences teeth and implants	-	90	Measurements in pocket depth, not in bone loss	-	-	-	-	-
5. Leonhardt et al	1992	Ligature, subgingival around 2 implants and 2 teeth	Cotton	NA	No	42d	None	-	-	At baseline, atd21 plaque accumulation and 30d after ligature removal	-	Middle implant reported in Lindhe 1992	-	-	42	-	-	-	-	-	-
6. Lindhe et al	1992	Ligature, submarginal Followed by 1 month plaque accumulation after removal	Silk	NA	Replaced after 3w	6w	Ligatures around 2 teeth	PI, BoP,	All teeth and implantsclinically stable at end of study	In Leonhardt et al, 1992	Periapical radiographs	Size and content of ICT reported in Morphometric measurements	Size and content of ICT reported in Morphometric measurements	-	32 with ligature + 30 with spontaneous accumulation	Implant 3,2±0,3 Tooth 1,1±0,6	-	X-rays, periapical with eggen holder. Not specified whehter a mean- or max value was used for each implant	-	-	None
7. Akagawa et al	1993	Ligature (1 mm above gingival margin)	Silk	NA	No	12m (Bacterial sampling	Brush, interdental brush,	-	-	Types and number of bacteria classified	-	-	-	-	365	-	-	-	-	-	None reported

13. Singh et al	1993	Ligature	Silk	NA	NA	NA	Ligatures around all implants	Clinical evalutation of defect before and after treatment	-	-	-	Ground sections SEM	-	-	NA	CTRL: 3,75±0,46 TEST 1: 2,94±0,49 TEST 2: 3,00±0,92	-	-	-	-	-
14. Lang et al	1994	(A) Ligature (B) Spontaneous plaque accumulation (C) Control	Silk	NA	New ligatures on top of old every 4w	(A) 4m (B) 2m (C) 2m	Rubber cup and pumice once a week + Soft brush 3 times/w.	PI, GI, BoP, PPD with Florida probe set at 0,2N, CAL	-	-	-	Ground sections with fixed probe tip on mesial and distal sides: histologic probing depth, alveolar bone to probe tip distance, histologic attachment level	-	-	60, 240	NA, only CAL was measured	-	-	-	Registered in vertical bone loss box	Proble tip closer to bone crest in ligature group, similar in the 2 other groups
15. Schüpbach et al	1994	Ligature	Cotton floss	NA	Yes every 1m	5m	Ligatures around all implants	PI, GI, PPD, CAL	Periodontometer of Muhlemann, 500g force	-	Periapical, long cone, monthly	Ground sections. New bone after surgery measured	-	-	150	NA, 30-50% bone loss, not further specified	-	-	-	-	-
16. Weber et al	1994	Ligature, submarginal	Silk	4-0	No	60d	Ligatures around all implants, one dog received NSAID treatment and the other Placebo	Increasing GI and probing depths during ligature phase  TC-Sn-MDP given IV, uptake then measured with a radiation probe	All implants firmly anchored at start of ligature phase	-	IO at postsurgery, after 3m healing and after 60d ligature phase.	-	-	-	60	NSAID (bone loss %/ m) 0,866±0,351%  Placebo 5.729±0,384%	-	X-ray, periapical. Stents fabricated for each site	-	-	All implants integrated at baseline (after 3m healing)
17. Cook et al	1995	Ligature (tightened between fixture and abutment, suture ends extended to oral cavity)	Silk	4-0	No	4w, 8w, 16w and 26w	Weekly brushing. No ligature	-	-	-	Routine dental radiographs	Ground sections - Bone and tissue apposition, porosity of coating on experimental implants, HA thickness on contral implants	Degree of inflammatory response (0-5): Minimal in both CSTi and HA at all time periods examined.	-	28+56+112+182	Histology results at 182d (5 animals): 14x CSTi: 1,96±0,94 28x HA: 2,69±1,27	-	Histo. Mean + SD	-	2 lost: One prior to abutment surgery, the other removed at 2 <sup>nd</sup> surgery due to infection	
18. Ericsson et al	1995	Spontaneous plaque accumulation around the most distal implant on both sides	-	-	-	9m	Daily brushing and dentifrice around the 2 medial implants on each side	Gross examination of plaque and inflammation	-	-	-	Decalcified blocks sectioned prepared for light microscopy according to method described by Berglundh in 1994 (EPON embedded sections). Size and composition of ICT etc.	Composition of plaque associated ICT and abutment ICT tissues and cells. No significant differences between groups	-	270	Measurements in pocket depth, not in bone loss	-	Clinical	-	-	-
19. Hürzeler et al	1995	Ligature	Silk	4-0	Additional ligatures over old ones every 2w	3m	Ligatures around all implants	-	-	-	-	-	-	-	90	30-50% bone loss. No further details provided.	-	-	-	-	-

20. Marinello et al	1995	Ligature, submarginal position	Cotton	NA	No	4-6w (at approx. 25% destruction of original bone height) + 1m (2 dogs) and 3 m (3 dogs)spontaneous plaque accumulation	Ligatures around all implants	-	-	-	-	Various measures of mucosa and plaque associated infiltrate	Various measures of mucosa and cell+tissue composition of plaque associated infiltrate.	-	150+90	NA – At 3m from ligature removal, scar tissue healing without evidence of ongoing tissue destruction was noticed compared to the 1m group.	-	-	-	-	-
21. Warrer et al	1995	Ligature – supramarginal position without attempt to place them submarginally	Cotton-wool	NA	Every 3m with the same supramarginal technique	9m	4 groups: 1-2: Keratinized mucosa with- (1) and without ligature (2) 3-4: Non-keratinized mucosa with- (3) and without ligature (4)  PI, BoP, PPD, CAL and recession on 4 surfaces per implant (later pooled) every 3m  Data in table 1 of paper	-	-	-	-	Ground sections	Remaining bone height on mesial and distal sides	-	270	Bone loss calculated from fig 7:  (1) 0,96 mm (2) 0,8 mm (3) 1,65 mm (4) 1,05 mm  Bone-implant contact leangth in % of implant leangth (table 1):  (1) 63±7,5 (2) 65±9,01 (3) 54,38 (4) 61,88	Histo - mean of mesial and distal aspects of implants			All implants integrated	
22. Ericsson et al	1996	Ligature (submarginal)	Cotton (floss)	NA	No	6-8w (about 20% bone loss) + 1m spontaneous plaqueaccumulation followed by amoxicillin for 3w	Ligatures around all implants	-	-	-	Before ligature and at 6-8w	Ground sections	-	-	5m + 1w+10d attfer ligature removal. (3w amoxicillin starting 1m after ligature removal)	No specific measurement at ligature removal	-	X-ray	-	-	-
23. Isidor	1996	(1) Overload on one side, (2) Ligature on other side and symphysial region (marginal position)	Cotton cord	NA	-	18m	(1) Brush once/ week. Debridement once/ month. (2)	BoP, PPD, CAL	Periotest and manual mobility every 3m	-	IO. Parallelling technique	Ground sections Marginal bone loss BIC	-	-	540	(1) Periotest: 2 implants removed due to mobility. 6 remaining with values 6, 18, 45, 25, -7, -7. Almost complete loss of integration in all but 2	-	Light microscopic analysis of ground sections	-	-	2 implants removed at abutment surgery 2 lost during overload phase

							No hygiene									implants with 1,8 and 1,9 mm bone loss resp. CAL loss: 0,6 mm (2) Periotest: -6, -5, -6, -7, -2, -5, -5, -4, -6, -5 Marginal bone loss (mm): 2,4 (0,8-4) CAL loss: 1,1 mm							
24. Persson et al	1996	Ligature, submarginal	Cotton	NA	-	About 6w/ 20% radiographic bone loss	Ligatures on both sides	Bone loss measured with probe during PI-surgery.	-	-	IO	Marginal bone loss after GBR.	Cell composition and localisation of ICT	-	42	Implant shoulder to bottom of defect: 1,8±0,45 (30 days after ligature removal)	-	Periodontal probe, mean value of 4 sides per implant	-	-	-		
25. Schou et al	1996	Ligature – subgingival and supragingival with lingual knot	Silk, braided (Ethicon)	3-0	no	7w	(1) Implant + - ligature (2) Ankylosed tooth +- ligature (3) normal tooth +- ligature Ligatures around all implants, contralateral 2 <sup>nd</sup> molar and non-ligated second premolar (anterior abutment)	BoP, PPD, CAL. Electronic probe 25g, 0,5 mm diam.	-	Phase contrast microscopy for presence and amount of various bacteria	-	-	-	-	49	-	-	-	-	-	1 implant and 2 replanted teeth planned to remain ligated.		
26. Fritz et al	1997	Ligature	Silk (braided)	NA	No	6m		Plaque score, redness, PPD	NA	-	Periapical with “quantitative subtraction method”	-	-	-	90+180	Root form implants: 90d: 1,35±0,24 180d: 1,72±0,28  Plate form: 90d: 1,59±0,44 180d: 1,89±0,45	-	"X-ray periapical with standardized technique Quantitative subtraction method"	-	-	-		
27. Hanisch et al	1997	Ligature (submarginal)	Cotton	NA	Yes, every 1m	10m + 1m additional plaque accumulation	Ligatures around all implants	Modified PI, GI, BOP, PPD, CAL. Calibrated probe	Periotest, Siemens	Submucosal samples from 1 randomly chosen implant in maxilla and mandible respectively. Morphotype, culture and DNA-probe	-	-	-	-	300	Maxilla: 3,3±1,2 Mandible: 3,4±1,4 Overall: 3,3±1,3 (2 months after ligature removal)	Maxilla: 2,0±0,5 Mandible: 2,0±0,4 Overall: 2,0±0,5	Clinical measurement at abutment connection and at reconstructive surgery after removal of soft tissue	-	-	1		
28. Hürzeler et al	1997	Ligature	Silk	4-0	Additional ligatures over old ones every 2w	3m	Ligatures around all implants	--	-	-	-	-	-	-	90	-	-	-	-	-	-		
29. Isidor	1998	(1) Overload on one side, (2) Ligature on other side and	Cotton cord	NA	-	18m	(1) Brush once/ week. Debridem	-	Periotest and manual mobility every 3m	-	IO. Parallelling technique	Ground sections Marginal bone loss BIC	-	-	540	Fig. 2 in article X-rays (540 d) Overload: 4,6 Ligature: : 1,8	-	"X-rays Periapical with	-	-	2 implants removed at abutment surgery		

		symphysial region (marginal position)					ent once/ month. (2) No hygiene										Histology (540 d) Overload: 4,8 Ligature: 2,4		parallelling technique Not specified whehter a mean- or max value was used for each implant Histo. Mean of 2 mid-implant sections from the buccal aspect of each implant "			2 lost during overload phase
30. Isidor	1997	(1) Overload on one side, (2) Ligature on other side and symphysial region (marginal position)	Cotton cord	NA	-	18m	(1) Brush once/ week. Debridem ent once/ month. (2) No hygiene	-	Periotesta nd manual mobility every 3m	-		IO. Parallelling technique	Ground sections Marginal bone loss BIC	-	-	540	(1) Periotest: 2 implants removed due to mobility. 6 remaining with values 6, 18, 45, 25, -7, -7. Almost complete bone loss in all but 2 implants with 1,8 and 1,9 mm bone loss resp. (2) Periotest: -6, -5, -6, - 7, -2, -5, -5, -4, -6, -5 Marginal bone loss (mm): 2,4 (0,8-4)	-	Light microscopic analysis of ground sections	-	-	2 implants removed at abutment surgery 2 lost during overload phase
31. Saito et al	1996	Spontaneous plaque accumulation around functionally loaded implants. Soft food.	None	-	-	180d	2 different implant types vs control teeth, plaque accumulat ion around all implants	At baseline, 90d and 180d: PI, PPD, BoP,	At baseline 90d and 180d: Periotest	Yes, baseline, 90d and 180d: detection of black pigmented rods and actinobacillus actinomycetemco mitans respectively		IOs with semi- standardized film holder at implant installation, abutment connection, 90d and 180d.	-	-	-	180	No obvious bone resorption in any group	-	-	-	-	
32. Tillmann s et al	1997	Ligature, submarginal	Cotton, braided retraction cord (GingiBrai d, VanR Dental Products, Oxnard, CA)	NA (although type and brand mentione d)	Only if necessary at plaque control appointmen ts	3m 6 dogs  6m 8 dogs	Ligatures on one side, continued plaque control on the other side of the mandible	CAL, PPD at baseline and then monthly	Periotest at baseline and then monthly	No (reported in separate paper)		No	No (reported in separate study)	No (reported in separate study)	-	90 (n=14) and 180 (n=8) respectivel y after ligature placement	NA, only CAL measures provided	-	CAL measured with probe	-	-	3 implants lost, 1 of each kind.
33. Abraham sson et al	1998	Plaque accumulation	-	-	-	5m	-	"redness, swelling and bleeding on gentle probing in all systems"	-	-		-	LM analysis of ground sections. Localisation, vertical extension and area of ICT. Marginal bone position with abutment/fixture junction as reference	Fractions of ICT infiltrated with Collagen, vascular structures, fibroblasts, macrophages, lymphocytes, plasma cells, PMN cells and residual tissue.	-	150	NO BASELINE RECORDED Distance from abutment-fixture (Polished-TPS in ITI- implants) junction to marginal bone:	-	Histo. Mean + sd	-	-	None reported

39. Machado et al	1999	Lugatures, submarginal technique	Cotton	NA	No	1m	Ligatures around all implants	-	-	-	-	-	-	-	30	Bone loss not specifically measured	-	-	-	-	-
40. Persson et al	1999	Ligature	Cotton	NA	New ligatures after 1m and 2m	3m	-	-	-	-	IO	-	-	-	90	Baseline Average of 1,33±0,91, 1,60±0,47 and 1,42±0,76  30 days after ligature removal Average of 1,47±0,91, 3,37±0,20 and 3,54±0,67	-	Periapical x- rays with individual film holders prepared for each animal and site. Not specified whehter a mean- or max value was used for each implant.	-	-	
41. Wetzel et al	1999	Ligature around implants	Silk	NA	NA	4m	Ligatures around all implants	-	-	-	IO at different intervcals	Saw sections of plastic embedded specimens	After treatment: Original defect and bone fill after GTR	-	120	(1) TPS: 3,22 mm (1), (4): SLA: 2,77 (3) U: 3,18	-	Histo. Mesial and distal aspects investigated. Not specified whether an average of mesial and distal/ or greatest value was used.	-	2 lost during ligature phase. 6 lost after membrane phase and 1 during histological sectioning	
42. Comut et al	2000	Ligature (2 of 4 dogs in the study. Other 2 euthanized before peri-implantitis induction)	Silk	NA	No	4w	Daily brushing	PPD (0,2 N standardized force, average depth from 4 measuring sites). No significant increase between groups	-	-	-	Ground sections.	Inflammatory cell count. Percentage of epithelium, connective tissue and bone apposed to the area of interest (the apical 1 mm of the transmucosal part ot the implant). Orientation of collagen fibers in the gingival connective tissue. More inflammatory cells in ligature, but no meaningful differences.	-	28	-	-	-	-	None	
43. Machado et al	2000	Lugatures, submarginal technique	Cotton	NA	No	1m	Ligatures around all implants	-	-	-	-	-	-	-	30	Bone loss not specifically measured	-	-	-	-	-
44. Miyata et al	2000	Overload 100 µm 180 µm 250 µm during 4w	-	-	-	4w	No overload	No inflammatory responses at end of study but increase PPD with increasing overload (PPD, BoP)	Yes assessed clinically	-	-	Marginal bone loss measured	Inflammatory cell infiltrate assessed	-	28	No specific values provided Control: No bone loss 100 µm: None 180 µm: To half the implant 250 µm: Almost to the apical end of the implant	-	Histological measrement	-	-	
45. Nociti et al	2000	Ligature, submarginal	Cotton	NA	No	1m	Ligatures around all implants	-	-	-	-	-	-	-	30	Amount of bone loss not reported	-	Histo	-	-	No implants lost

46. Shibutani et al	2000	Ligature, submarginal technique	Silk	NA	NA	12w	Ligaures around all implants. IM bisphosph onate injection (Pamidron ate 0,6 mg/ kg IM every 3 days) vs control	-	-	-	Pariapical	-	-	-	84	Clinical bone loss (mm) in:  Pamidronate group 1,59±0,55  Control group 2,41±0,48	NA	Clinical measurement with periodontal probe on the buccal side at center of the implant	-	-	-
47. Deppe et al	2001	Ligature	Cotton floss	NA	No	3m	Ligatures around all implants	-	-	-	Periapical X-rays Long cone technique with custom made film holder	Ground sections – computer assisted histometry: Size of former bone defect and reappositioned bone	-	-	90	Group 1: 1,7±0,8 min 0,00 max 2,90 Group 2: 1,7±0,9 min 0,1 max 3,70 Group 3: 1,7±0,5 min 0,9 max 3,30 (all 3 groups identical in PI but differing in subsequent treatment)	-	X-ray peripical, customized holder. Mean value of mesial and distal aspect of each implant. X-ray, periapical, Quantitative subtraction technique. Average of mesial and distal bone loss for each implant	-	-	-
48. McCrack en et al	2001	2 years of normal loading (partial god denture) followed by Silk suture around 20 randomly selected implants	Silk suture	NA	No	6m	NA – Continued monthly plaque control?	-	-	-	Quantitative substraction technique	Plastic embedded ground sections – Bone to implant contact. Vertical marginal bone loss	-	-	180	Root form with ligature: 1.33 ± 0,30 Root form control: 0,71 ± 0,32 Plate form with ligature: 1,72 ± 0,47 Plate form control: 0,28 ± 0,13	-		-	-	1 root form and 4 plate form implants failed to integrate
49. Nociti et al.	2001a	Ligature	Cotton	NA	NP	4w	-	-	-	-	-	BIC	-	-	182	Only BIC was measured	-	Histo	-	-	None reported
50. Nociti et al.	2001b	Ligature	Cotton	NA	NP	30d	-	Attachment level	-	A lot of bacterial species	-	-	-	-	30	Loss of attachment level 3.70±0.54	-	X-ray and histo	-	-	None reported
51. Nociti et al.	2001c	Ligature	Cotton	NA	NP	4w	-	Vertical bone fill	-	-	-	-	-	-	28	Bone loss was not measured, only vertical bone fill after different GBR approaches	-	Clinical	-	-	None reported
52. Nociti et al	2001d	Ligature, submarginal	Cotton	NA	No	4w	Ligatures around all implants	Bone loss measured before and after treatment	-	-	-	-	-	-	28	Bone loss was not measured, only vertical bone fill after different GBR approaches	-	Clinical	-	-	None reported
