**Figure S1**

**Figure S1.** Heat-map of differentially expressed genes (DEGs) related to photosynthesis in CF and MGZ. Including genes encoding photosynthetic electron transport (PET) and ATPase. In the heat map, samples are represented by columns while genes are represented by rows. The values of gene expression (FPKM) are indicated using a color scale called 'row scale'. High expression is shown in pink, intermediate expression in white and low expression in green.
