

Supplementary Figure 1

Figure 1. A striking example of a precocious male coho salmon reared in our recirculating aquaculture system. This 20-month-old male had two conspicuously solid and white testes (indicated by arrows). The total body length of this fish was 30.5 cm, and the body weight was 346.8 g, whereas the gonads weighed 29.6 g, reaching an impressive gonadosomatic index of 8.6. Scale bar = 5 cm.
