Figure S1. EDX elemental analysis of (a) ZnO-QDs and (b) ZnO-QDs-SiO₂.

Figure S2. EDX elemental analysis of (a) ZnO-NPs and (b) ZnO-NPs-SiO₂.

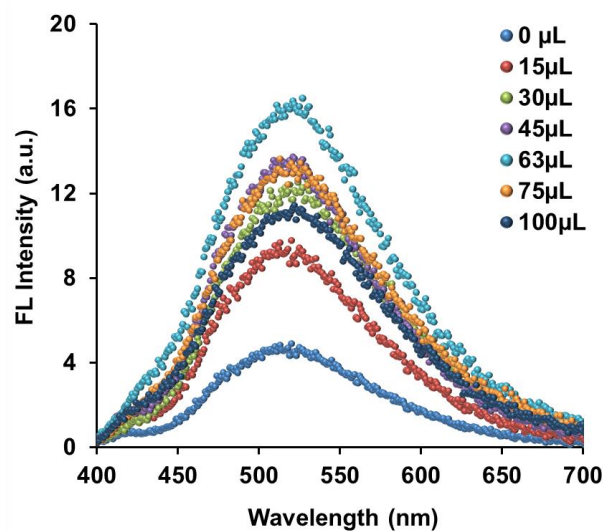

Figure S3. Emission spectra of different TEOS amounts (0, 15, 30, 45, 63, 75 and 100 μL) added to coat ZnO-NPs, according to the noted synthesis protocol of ZnO-NPs-SiO₂, under NAGase activity experimental conditions.

Figure S4. Calibration curves of NAGase enzymatic activity product (4-MU) emission intensities within control milk samples with and without TEOS coated ZnO nanomaterials addition to the reaction solution. Data are reported as mean \pm S.D. ($n \geq 3$).

Table S1. NAGase enzymatic activity product (4-MU) recovery studies within control milk samples with and without TEOS coated ZnO nanomaterials addition.

Assay	Spiked 4-MU (μM)	Detected 4-MU (μM)	Recovery (%)
Conventional	15	15.5 ± 0.4	103
ZnO-NPs-SiO ₂	15	15.7 ± 0.6	105
ZnO-QDs-SiO ₂	15	16.4 ± 0.4	109
