Haptoglobin-Conjugated Gold Nanoclusters as a Nanoantibiotic to Combat Bacteremia

Hsiu-Yi Chu ^{1,2,†}, Lung-Ching Chen ^{3,†}, Tsung-Rong Kuo ^{4,5,†}, Chun-Che Shih ^{6,7,8,9}, Sibidou Yougbaré ¹⁰, Yu-Han Chen ¹ and Tsai-Mu Cheng ^{1,6,*}

Figure S1. The plasmid map of pUC57-Amp vector.

Figure S2. The SDS-PAGE showed the fraction of purified MFP. MFP expressed in *E. coli* was purified by His-tag affinity column. The fractions of eluent were applied to run SDS-PAGE as visualized by Coomassie R-250 staining. The purity >95% eluted fractions were pulled and further concentrated in PBS (pH 8.0) for experiments. M: MW marker, 1-12: Elution fraction, MFP: multiple functional peptide.

Figure S3. The 3D structure of the derived Hp peptide.
