

## **Supplementary information**

### **Phonon Confinement Induced Non-Concomitant Near-Infrared Emission along a Single ZnO Nanowire: Spatial Evolution Study of Phononic and Photonic Properties**

Po -Hsun Shih, Tai-Yue Li, Yu-Chen Yeh and Sheng Yun Wu \*

Department of Physics, National Dong Hwa University, Hualien 97401, Taiwan

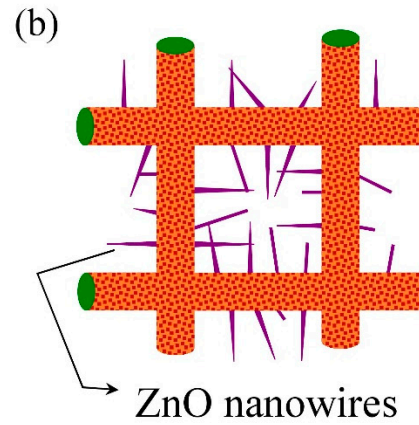

**Figure S1** Confocal Raman spectrum of ZnO powders. The peak profiles can be described by a multi-Voigt function. The fitting results are shown in **Table S1**.

**Figure S2** Simulated Raman line shape of the  $E_2^H$  mode of ZnO at various correlation length  $\xi_L$ .

**Figure S3** (a) Top view images for a porcelain boat, in which a high purity zinc ingot on a cleaned Ti-grid was mounted on a cut silicon wafer. (b) A schematic diagram of in-plane ZnO nanowires on Ti-grid.

**Figure S4** Schematic diagram of confocal Raman spectrometer (Wi-Tec alpha 300).

**Table S1** Summary of Fitting parameters of each phonon vibration mode of ZnO powder.

Position( $\text{cm}^{-1}$ )	FWHM( $\text{cm}^{-1}$ )	Height	Area	Symmetry	Process	Ref. [23] ( $\text{cm}^{-1}$ )
329.9	18.4	473	13504	$A_1 (E_2, E_1)$	$E_2^H-E_2^L$	333
380.2	15.8	242	4073	$A_1$	$A_1$ -TO	378
411.9	37.5	429	25224	$E_1$	$E_1$ -TO	410
436.7	10.3	3588	47703	$E_2$	$E_2^H$	438
537.2	59.9	212	19972	$A_1$	2LA; 2B <sub>1</sub> L	536
583.3	32.8	222	11437	$E_1$	$E_1$ -LO	590
654.5	92.0	215	31014	$E_1, E_2$	TA+LO	657
