This SI contains 2 pages of additional information, including 3 tables.
Experimental set-up

Table S1. Overview of the different experimental run.

experiment no.	Q (L/min)	Re (-)	ΔT (K)	number of pipes SST/C-PP
A			10	4/4
B			10	5/5
C1			10	1/1
C2			5	2/2
C3	3.6	3000	2	2/2
D1			10	1/1
D2			5	2/2
D3			2	2/2
E			5	5/5

Statistical analysis

Table S2. Results of the Shapiro-Wilk and Kolmogorov-Smirnov tests for the parameters mean biofilm thickness, mean biofilm density and fraction of inorganic compounds at the sensor setting ΔT=10 K for both pipe materials.

pipe material	parameter	n	p-value (Shapiro-Wilk)	p-value (Kolmogorov-Smirnov)
C-PP	mean biofilm thickness \bar{L}_F		0.337	0.560
	mean biofilm density	8	0.140	0.886
	fraction of inorganic compounds		0.177	0.902

SST	mean biofilm thickness \bar{L}_F	9	0.300	0.739
SST	mean biofilm density	9	0.004	0.286
SST	fraction of inorganic compounds		0.003	0.469

In combination with a Grubbs test the statistical analysis revealed one data set of outliers for the mean biofilm density and fraction of inorganic compounds of the SST pipe material. This data set was excluded from the analysis.

Table S3. Results of the Shapiro-Wilk and Kolmogorov-Smirnov tests for the parameters mean biofilm thickness, mean biofilm density and fraction of inorganic compounds at the sensor setting $\Delta T=5$ K for both pipe materials.

pipe material	parameter	n	p-value (Shapiro-Wilk)	p-value (Kolmogorov-Smirnov)
C-PP	mean biofilm thickness \bar{L}_F		0.474	1
	mean biofilm density	8	0.010	0.213
	fraction of inorganic compounds		0.012	0.303
SST	mean biofilm thickness \bar{L}_F		0.930	1
	mean biofilm density	8	0.014	0.607
	fraction of inorganic compounds		0.089	0.800

In addition the Grubbs test did not reveal any outliers for the data sets of either of the pipe materials at the $\Delta T=5$ K setting of the sensor.
