

Bioactive coatings with Ag-camphorimine complexes to prevent surface colonization by the pathogenic yeast *Candida albicans*

M. Joana F. Pinheiro ¹, Joana P. Costa ², Fernanda Marques ³, Nuno P. Mira ^{1,*}, M. Fernanda N. N. Carvalho ^{2,*}, Marta M. Alves ^{2,*}

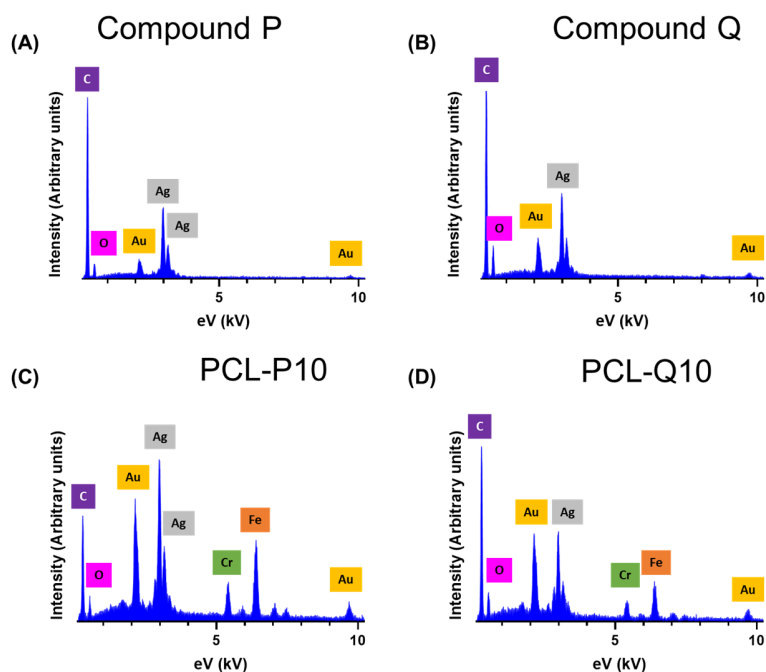

Figure S1 – Chemical characterization of compounds P and Q, and PCL coatings; EDS spectra of compound P (A) and Q (B), and of PCL-P10 (C) and PCL-Q10 (D) coatings.

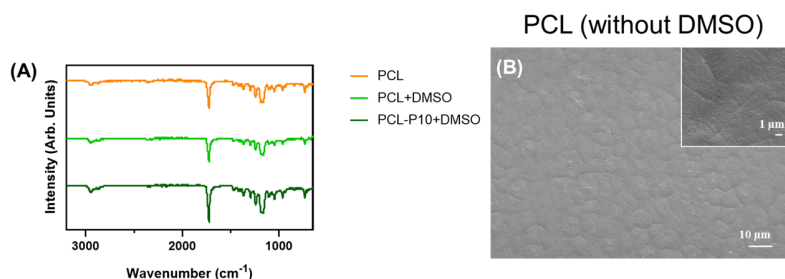

Figure S2 – Physicochemical characterization of PCL coatings using chloroform; Attenuated total reflectance-Fourier transform infrared (ATR-FTIR) spectra of PCL, PCL with dimethyl sulfoxide (DMSO) and PCL with DMSO and compound P (10x MIC) (A); SEM micrographs of the PCL coating without DMSO in the coating formulation (B).
