Table S4: Geographical locations of sampling sites

Sources	No. of Isolates (n=60)	Geographical Distribution of Sampling Sites
Kala Shah Kaku		
Wastewater	13	Sundar industrial estate, Kasur,
		College Road, Valencia town, Thokar Niaz Baig
		Ada plot
Bedian Road, Manga mandi,		
Soil	07	Raiwind, Ravi interchange
		Kasur
Cattle faeces	09	Animal samples were collected from 5 different farms, Johar town block F,
Rectal swab	06	Edwn lane villas 2, Khna nau kahna,
Milk	05	Valencia town and Sarwar
Urine	06	UoI Teaching hospital, Lahore
Pus	05	Sharif city complex, Lahore
Sputum	05	Jinnah hospital, Lahore
Blood culture	02	Rehman Medical complex, Peshawer
Tissue culture	02	Nishter hospital, Multan District Head Quarter Hospital, Rawalpindi

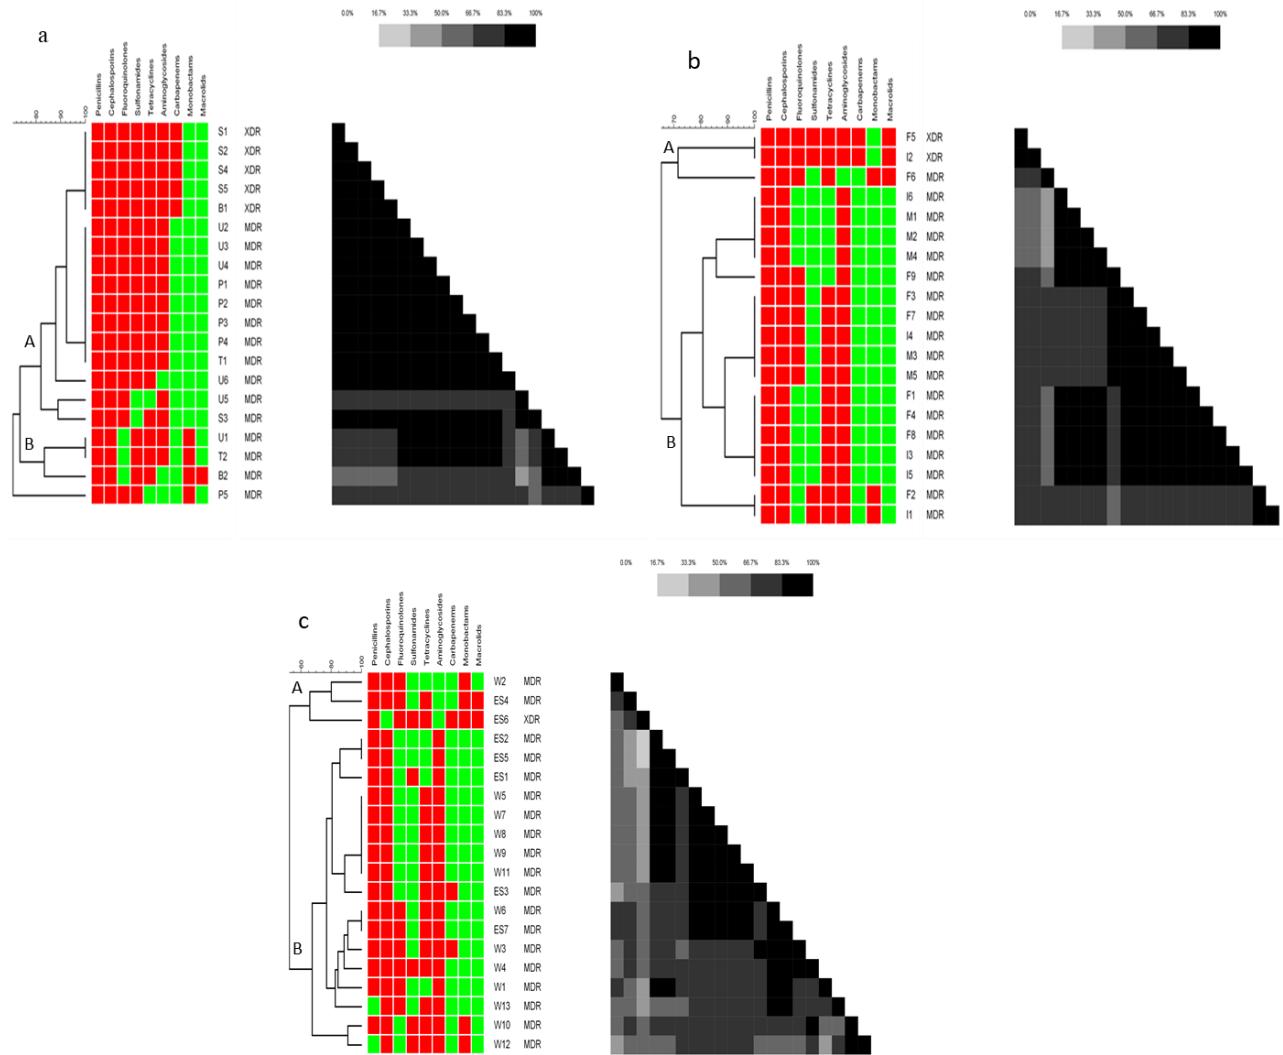

Figure S1: Clustering of *E. coli* strains from human (a), animal (b) and environmental (c) origins based on antimicrobial susceptibility patterns.

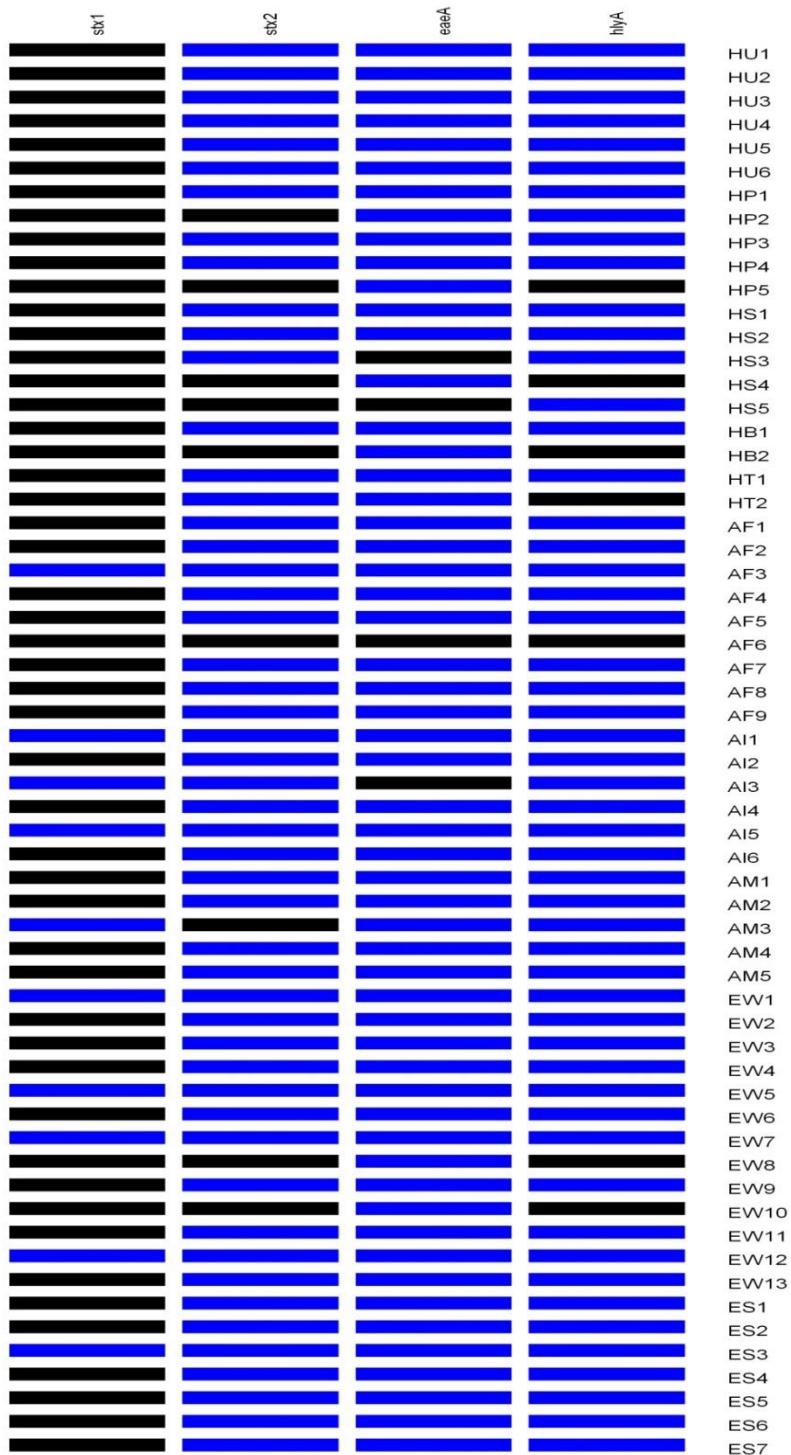

Figure S2. Heatmap showing the virulence genes profiles of all *E. coli* strains. Blue colour indicates the presence and while black colour indicates the absence of the gene. E letter is used for environment, A for animal and H for human origin.

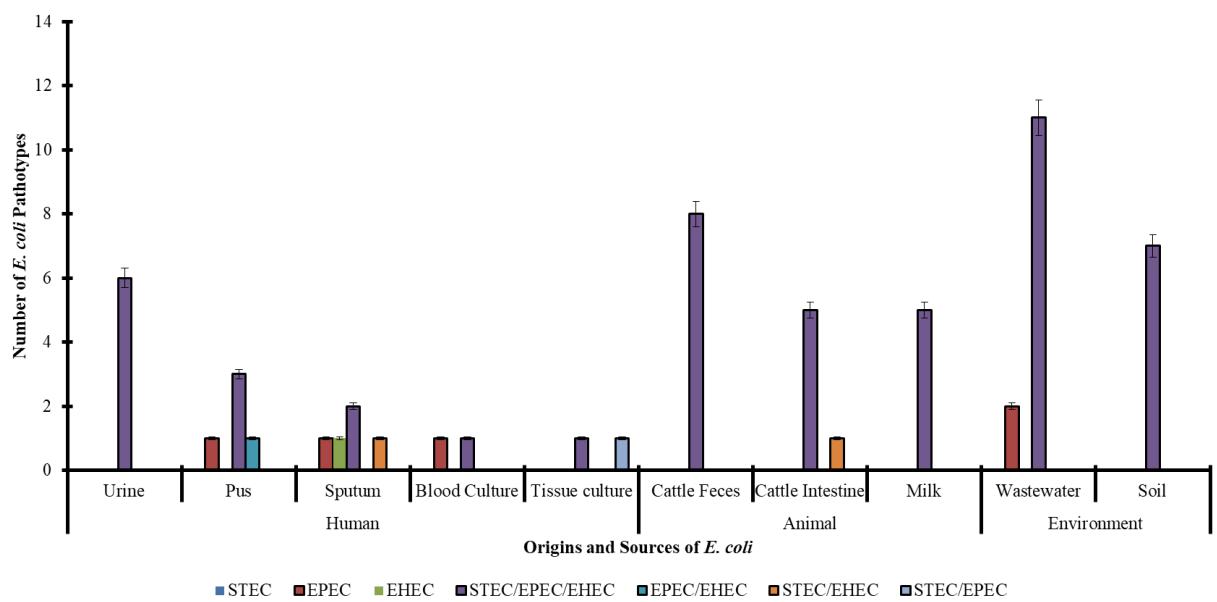

Figure S3: Distribution of *E. coli* pathotypes among human, animal and environmental origins and sources.

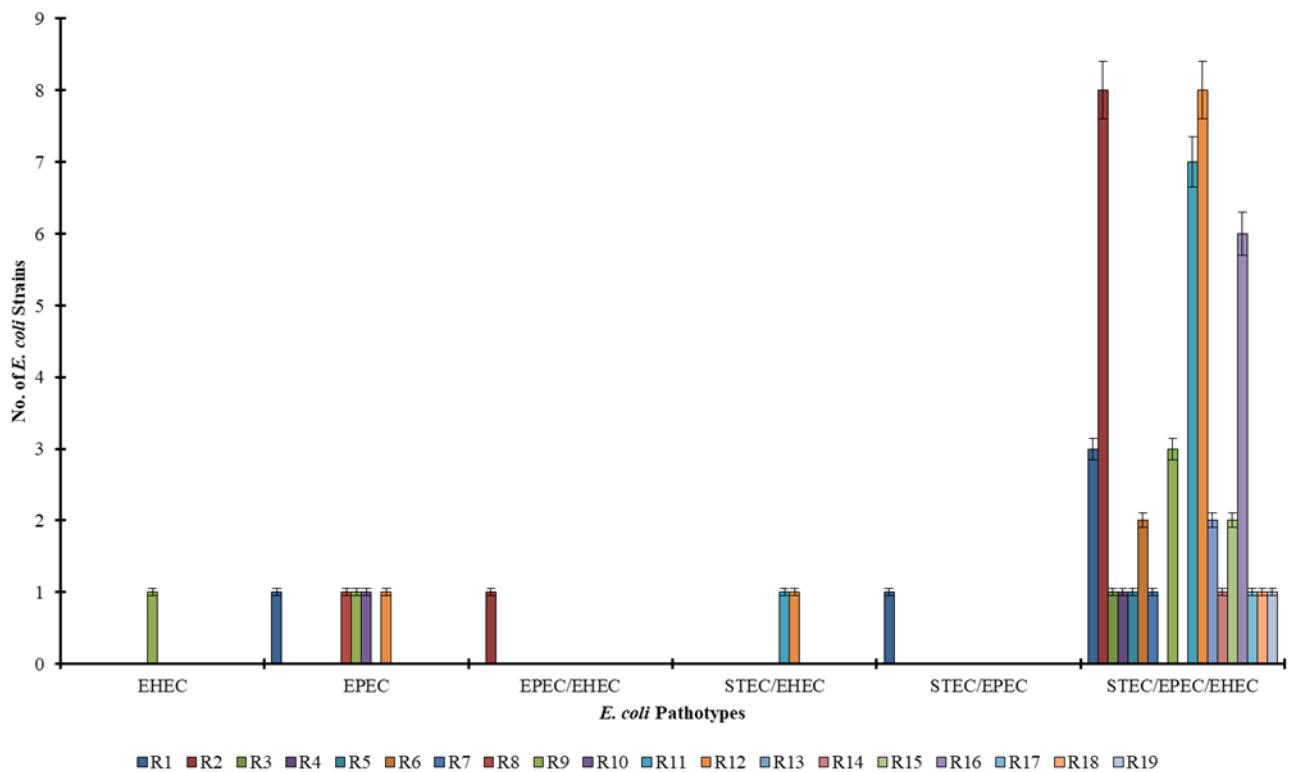

Figure S4: Association of pathotypes with antimicrobial resistance profiles (P -value 0.08).

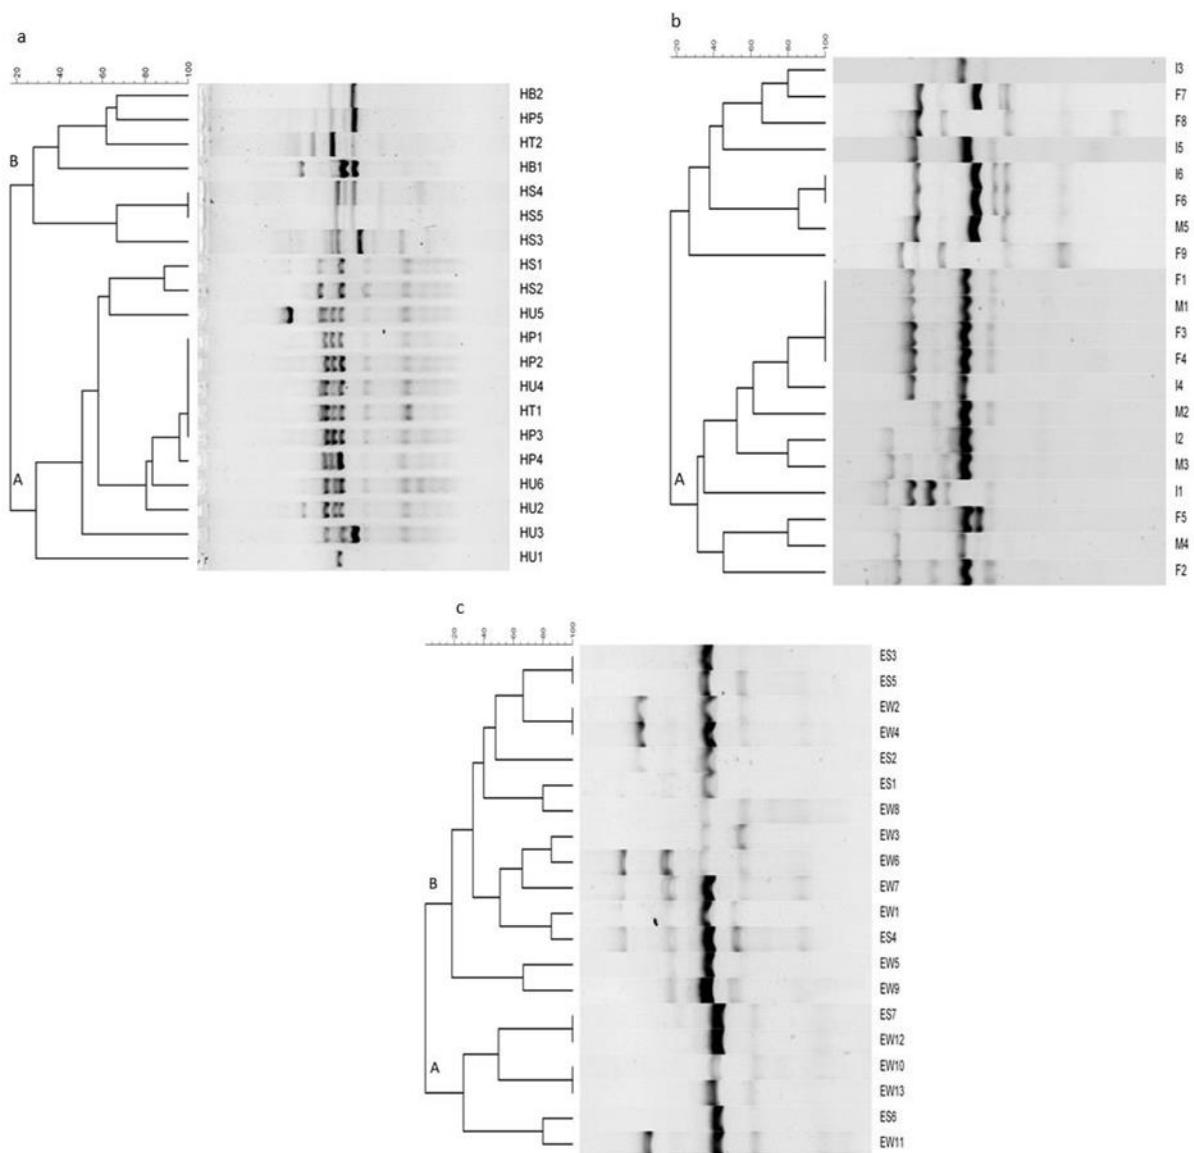

Figure S5: ERIC-PCR fingerprints based dendograms of human (a), animal (b), environmental (c) strains based on Dice similarity coefficient UPGMA.
