

Figure S3. Number of isolates with carbapenemase genes identified and the non-susceptibility of the isolates to carbapenems (ertapenem, imipenem and meropenem) by BMD. Ertapenem results for *P. aeruginosa* and *A. baumannii* were reported as NS due to intrinsic resistance. (N=74; showing 12 most frequent and any genes that were susceptible to meropenem). NS= I +R
