The optical images of films of the polycations on the glass substrate were obtained using Altami Lum 1 LED (Altami, Russia) microscope with a Canon photcamera (Canon, Japan). The typical image of polymer film before and after wash-off cycle is presented on Figure S1.

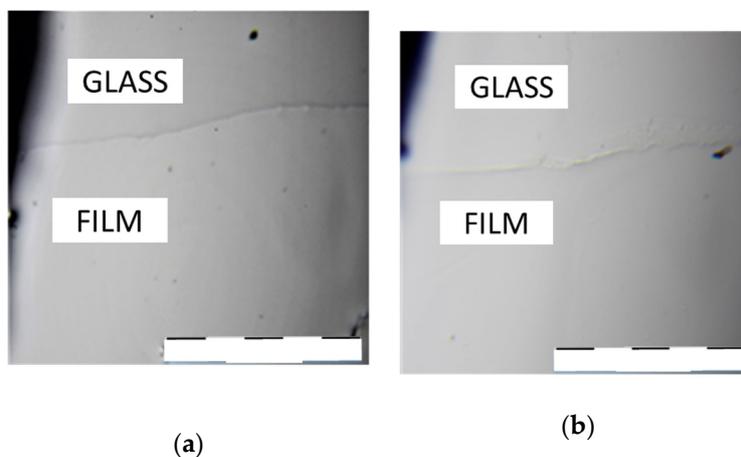

Figure S1. Image of CP1 film on the glass substrate after formation of the coating (a) and after wash-off (b). The scale bar is 150 μm .
