

Identification of Putative Neuropeptides that Alter the Behaviour of *Schistosoma mansoni* Cercariae

Conor E. Fogarty et al.

File S1. Comparative sequence analysis of all precursor proteins identified in this study.

Alignment of Cercariae neuropeptide

Method

Annotation of putative *S. mansoni* neuropeptides was performed by BLASTp search against non-redundant protein database, NCBI (May, 21st 2020). Homologous proteins match with *S. mansoni* neuropeptides with $E\text{-value} \leq 0.5$ were retrieved from NCBI and used for multiple sequence alignment. Amino acid alignment was generated using MEGA X software (version 10.1.8) (Kumar, Stecher et al. 2018) with parameter set as follows: algorithm, ClustalW; gap opening penalty, 10; gap extension penalty, 0.2. Visualization of alignment was carried out on TeXworks software. Sequence logo was generated by using WebLogo application (Crooks et al., 2004).

Table 1. Species and species abbreviations used in the alignments.

Species	Species abbreviation
<i>Clonorchis sinensis</i>	<i>C. sinensis</i>
<i>Dugesia japonica</i>	<i>D. japonica</i>
<i>Echinococcus granulosus</i>	<i>E. granulosus</i>
<i>Echinococcus multilocularis</i>	<i>E. multilocularis</i>
<i>Echinostoma caproni</i>	<i>E. caproni</i>
<i>Fasciola gigantica</i>	<i>F. gigantica</i>
<i>Fasciola hepatica</i>	<i>F. hepatica</i>
<i>Fasciolopsis buski</i>	<i>F. buski</i>
<i>Macrostomum lignano</i>	<i>M. lignano</i>
<i>Mesocostoides corti</i>	<i>M. corti</i>
<i>Opisthorchis felinus</i>	<i>O. felinus</i>
<i>Opisthorchis viverrini</i>	<i>O. viverrini</i>
<i>Paragonimus westermani</i>	<i>P. westermani</i>
<i>Schistosoma bovis</i>	<i>S. bovis</i>
<i>Schistosoma curassoni</i>	<i>S. curassoni</i>
<i>Schistosoma haematobium</i>	<i>S. haematobium</i>
<i>Schistosoma japonicum</i>	<i>S. japonicum</i>
<i>Schistosoma mansoni</i>	<i>S. mansoni</i>
<i>Schistosoma margrebowiei</i>	<i>S. margrebowiei</i>
<i>Schistosoma mattheei</i>	<i>S. mattheei</i>
<i>Schmidtea mediterranea</i>	<i>Sch. mediterranea</i>
<i>Trichobilharzia regenti</i>	<i>T. regenti</i>

Kumar, S., et al. (2018). "MEGA X: Molecular Evolutionary Genetics Analysis across Computing Platforms." *Mol Biol Evol* **35**(6): 1547-1549.

The Molecular Evolutionary Genetics Analysis (Mega) software implements many analytical methods and tools for phylogenomics and phylomedicine. Here, we report a transformation of Mega to enable cross-platform use on Microsoft Windows and Linux operating systems. Mega X does not require virtualization or emulation software and provides a uniform user experience across platforms. Mega X has additionally been upgraded to use multiple computing cores for many molecular evolutionary analyses. Mega X is available in two interfaces (graphical and command line) and can be downloaded from www.megasoftware.net free of charge.
