

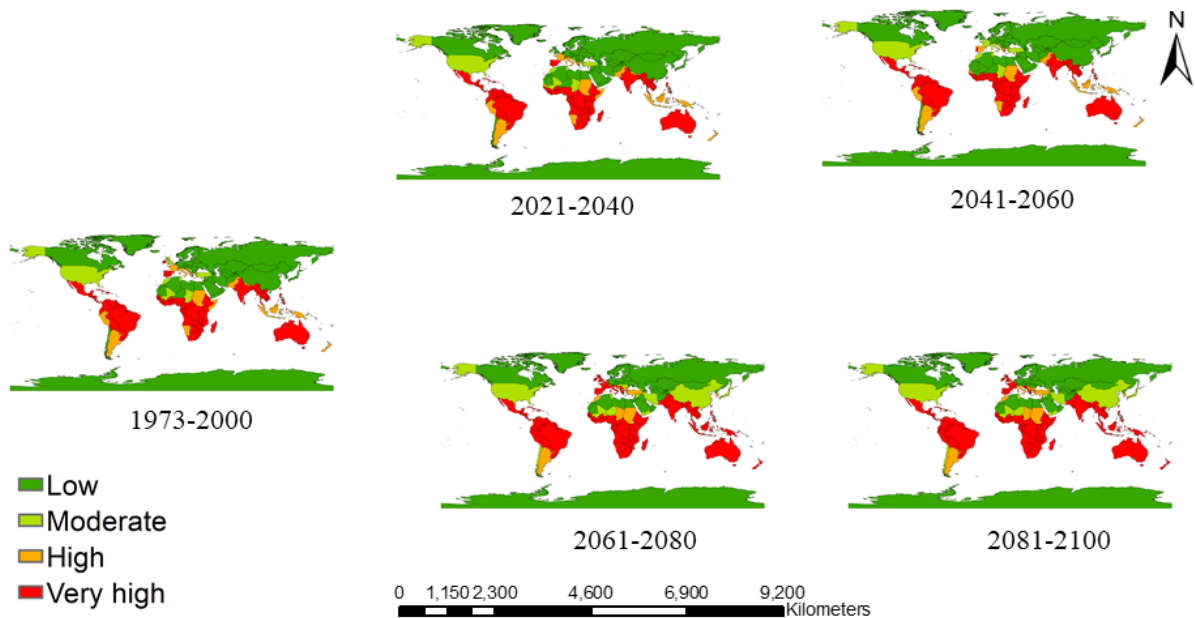

**Figure S2a.** Estimation of the mean habitat suitability of *P. hysterophorus* in different countries of the world under the current climate (1973–2000) and future climate scenario (SSP2-4.5; 2021–2040, 2041–2060, 2061–2080, and 2081–2100). Mean habitat suitability was classified into four categories (low, moderate, high, and very high), each of which is indicated with a different color.

**Figure S2b.** Estimation of the mean habitat suitability of *P. hysterophorus* in different countries of the world under the current climate (1973–2000) and future climate scenario (SSP5-8.5; 2021–2040, 2041–2060, 2061–2080, and 2081–2100). Mean habitat suitability was classified into four categories (low, moderate, high, and very high), each of which is indicated with a different color.
