# Supplementary Materials.

Supplementary Figure

Figure S1. (**a**) Scores and (**b**) loading plot from OPLS-DA. The model parameters are R2Y-35.2% and Q2-30%. CV-ANOVA *p*-value of ≤0.001, indicates that the OPLS-DA model is statistically significant and provides good discriminatory power in distinguishing between the specified groups. Metabolites related to phospholipids are highlighted in the loadings plot.
